Across the Potomac from Washington

Growing Pains Afflict Arlington County and Alexandria as the Nation's Capital Overflows into Near-by Virginia

BY ALBERT W. ARWOOD

THE NERVE center of our national defense is not in Washington, D. C., as one might gather from newspapers, radio, and television, but across the Potomac River in Virginia.

Until recently a nondescript no man's land, the three-mile Virginia strip between Arlington Memorial Bridge and historic Alexandria is now dominated by that incredible building the Pentagon.

Symbol and center of our military power, the huge structure is the headquarters of the Joint Chiefs of Staff and all those branches of the Army, Navy, and Air Force which must be in close touch with one another and with the top command.

Unofficial Adjunct to the Capital

The average American citizen might well regard the Pentagon as the most important building in the world. Here are devised measures to protect our lives and property from foreign aggressors.

At Pentagon desks sit men and women, in and out of uniform, directing activities which take the largest single bite out of the taxpayer's dollar. Military expenditures will account for 67 percent of the \$79,067,000,000 to be spent according to the Federal budget for fiscal 1953.

Although the Pentagon is not in Washington, it might as well be for all practical purposes. Back in 1791 George Washington chose a plot of land 10 miles square, straddling the Potomac, as a site for a National Capital. But the original Federal City was built entirely on the Maryland side, and in 1846 Congress permitted the Virginia part to retrocede to the State.

Today, however, this Virginia strip has become a great, if unofficial, adjunct capital, and into it both the activities and the residents of Washington continue to pour with irresistible force.

Heart, hub, and pivot of this new Virginia metropolis is the Pentagon, the world's largest office building, in which 32,000 defense workers find room (pages 12-13).

Most of the building is open to the public during normal working hours, but there are some areas which only a selected few may enter. Among these are the headquarters of the Joint Chiefs of Staff and the Research and Development Board.

Built in World War II as headquarters for the War Department, the Pentagon was originally dubbed "Somervell's Folly," after Gen. Brehon Somervell, of the Army Engineers, who built it.*

But it has proved anything but folly, having saved a vast sum in rent formerly paid for the use of privately owned buildings. Every effort has been made to concentrate related activities and to prevent costly scattering throughout the vast spaces.

"Prisoners of the Pentagon"

Agreeing that the building, with its air-conditioning and wide corridors, is a comfortable place to work, its occupants nonetheless describe themselves as "prisoners of the Pentagon."

This is because it is almost impossible to leave at lunchtime. Restaurants are too far away, and there is danger of losing one's park-

* See "Wartime Washington," by William H. Nicholas, NATIONAL GEOGRAPHIC MAGAZINE, September, 1943.

Top Brass: The Joint Chiefs of Staff Meet in a Guarded Pentagon Room

Arlington County, Virginia, contains both the Pentagon, where the defense chiefs work, and Fort Myer, where many of them live. Keeping America strong is the responsibility of Gen. J. Lawton Collins, Chief of Staff of the Army; Gen. Hoyt S. Vandenberg, Chief of Staff of the Air Force; General of the Army Omar N. Bradley, Chairman of the Joint Chiefs, and Admiral William M. Fechteler, Chief of Naval Operations.

ing space. Besides, if the worker is not of high official rank, his parking space is at a great distance from the building.

To provide close-in parking for 32,000 people working in one building is impossible, and more assignments are made than there are actual spaces. Thus the latecomer gets left, or illegally uses someone else's space. Parking violations run as high as 250 a week. Consequently, many workers arrive before breakfast to assure parking.

The building has ample eating facilities, ranging from stand-up snack bars to the private dining room of the Secretary. There are four public cafeterias, two for officers, and dining rooms for top brass and high executives. Many a vacuum jug of coffee is taken from the snack bars to lunchtime conferences of generals and admirals. In summer employees enjoy an open-air cafe in the inner court (page 14).

The Pentagon's vast concourse, with its many stores and its changing exhibits, is of un-

failing interest to visitors (page 15). Exhibits which have attracted special attention were of jet engines, submarines, photography, handicrafts by enlisted men, and military decorations and medals.

Here also is MARS, headquarters of the Army and Air Force Military Affiliate Radio System. This station exists to create interest in radio and to train hams for military communications in the event of war.

Floor Plan Easy to Follow

There are many jokes about getting lost in the Pentagon's labyrinth of rings, corridors, ramps, and escalators. Actually, a study of the little map handed out at reception desks reveals the building's plan as strikingly simple.

The five floors are laid out in five concentric rings, like those of a tree, lettered A, B, C, D, E. Ten numbered corridors, radiating from the inner ring like the spokes of a wheel, intersect the rings.

Thus, a visitor looking for room 4D620

Parkington, Arlington's New Shopping Center, Woos Customers with 5-cent Parking

Washington traffic, like that in other big cities, is so dense that motor-borne trade is gravitating to suburbs. The Hecht Co., a downtown department store, caters to Virginia motorists with a \$15,000,000 business center. For a nickel, any shopper may park three hours in Hecht's 2,000-car depot, one of the world's largest, and shop at any of 19 stores in the development. These customers drove out from Washington.

would first take a ramp or escalator to the fourth floor. Then he would proceed to ring D and follow the signs to corridor 6 and room 20.

Even so, many take a wrong turn, or strike out boldly without consulting the map, and soon find themselves wandering hopelessly over some 17 miles of corridors. Some executives send guides to meet callers and pilot them to their destinations.

Pentagon Too Big for Washington

One of the Pentagon's most remarkable features is Liberty 5-6700, the telephone exchange that handles about 105,000 calls a day for the Department of Defense. Five switchboards are operated so efficiently that calls are connected almost instantly with any one of more than 43,000 extensions.

Too big for downtown Washington, the Pentagon was built beyond the Potomac, and it is difficult to see how the site could have been more magnificently improved. Highways

to the building are arranged to give much-needed approaches to the river crossings and to Washington from the south and west (map, page 7).

Scarcely more than a mile from the Pentagon and less than four miles from the heart of downtown Washington is one of the great air crossroads of the world, the Washington National Airport (pages 26 and 27).

Second largest in the country in airline operations, it is distinctive among great airports in its strategic location and in its proximity to the main features, both military and civil, of the metropolitan area which it serves. It is thus in contrast with the airports of most large cities, which are seven or eight miles from their metropolitan centers.

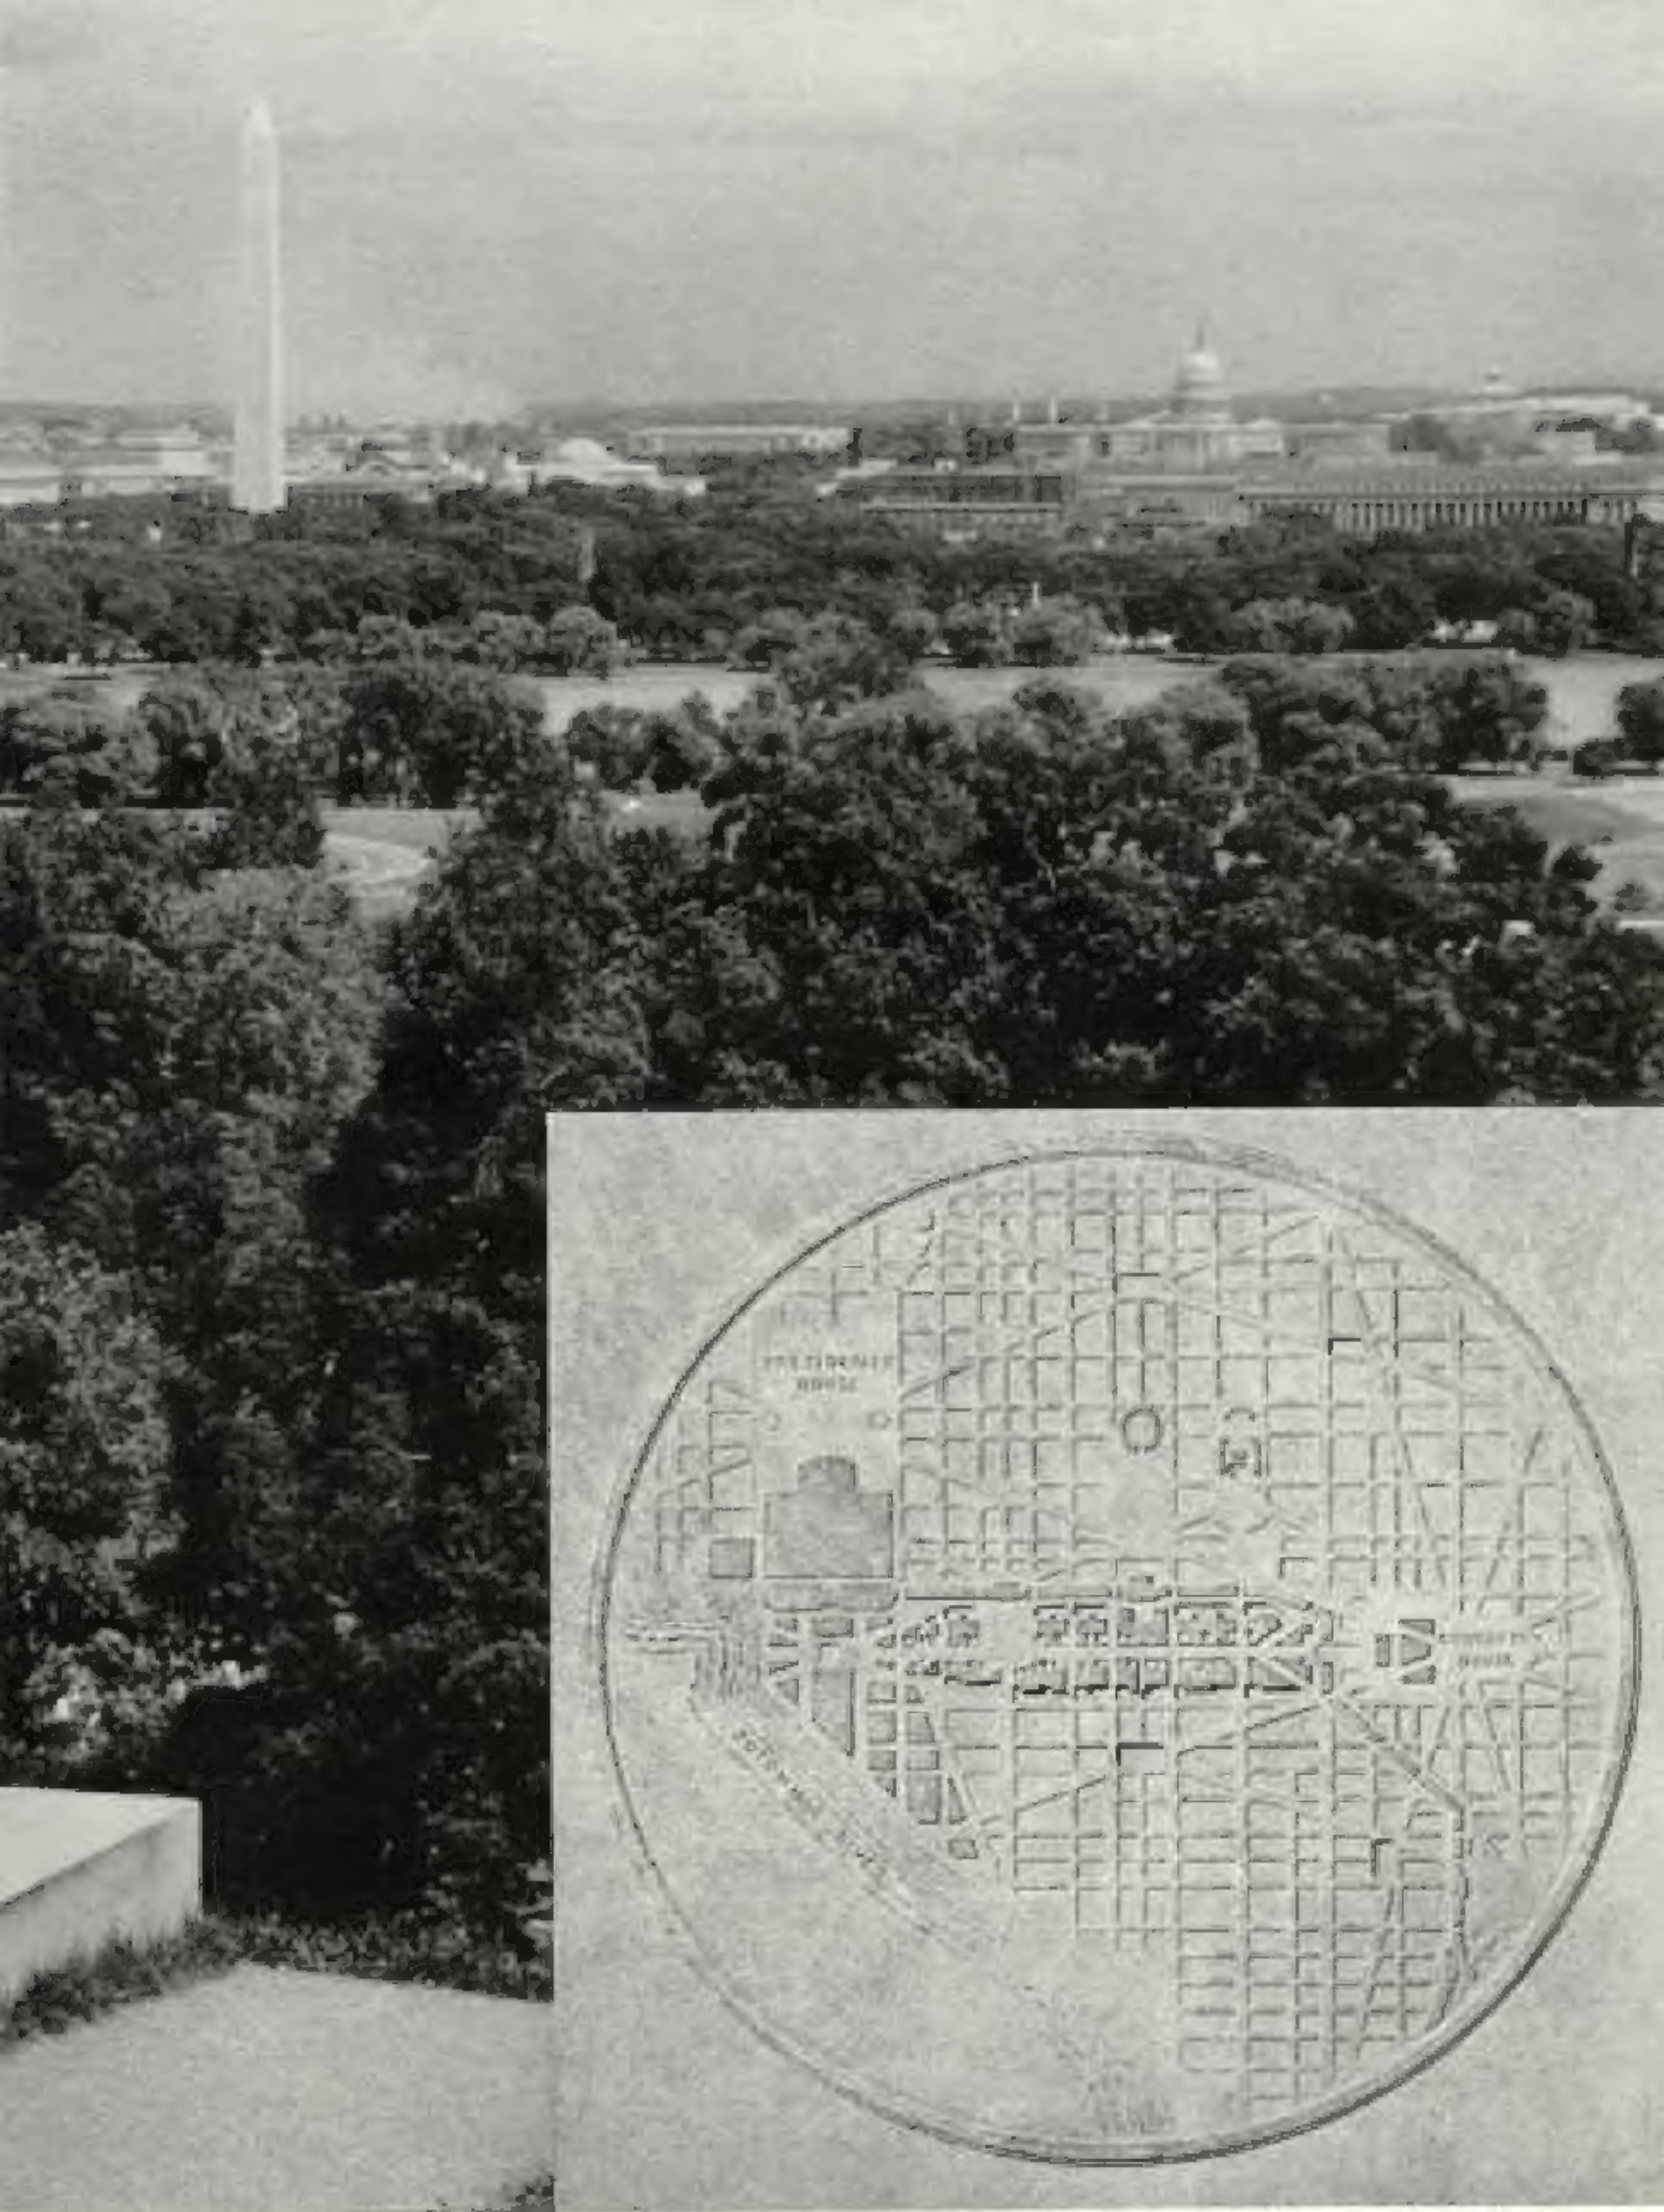

This civilian airport, the only one owned and operated by the Government, is the landing and taking-off place for the President, foreign rulers, statesmen, and diplomats.

The field is extraordinarily convenient for the use of the services. The military rents a

hangar from the airport, just as the civil airlines do, where planes are serviced and maintained.

Many of the arrivals and departures of dignitaries, often men who are shaping the destinies of the world, are accompanied by elaborate ceremonies, with military detachments, welcoming officials, and all that goes with such occasions.

At times the take-offs and landings total two a minute. With such a flow and with the constant coming and going of celebrities, the very air seems charged with excitement and the pulse beat of adventure.

This is primarily a domestic airport, with many daily flights to New York City, Chicago, the west coast, and other points in the United States. But it has such international facilities as customs, immigration, and public health, and becomes a direct point for international civilian flights when La Guardia or other east-coast airports are closed down.

Despite a recently completed large addition to the main building, and despite every technical improvement and modern device, aircraft are forced to double park at times, even with 16 gate positions available.

Air lanes for getting in are saturated, ideal

efficiency is unfavorably affected by very close proximity to military airfields, and the total area is small.

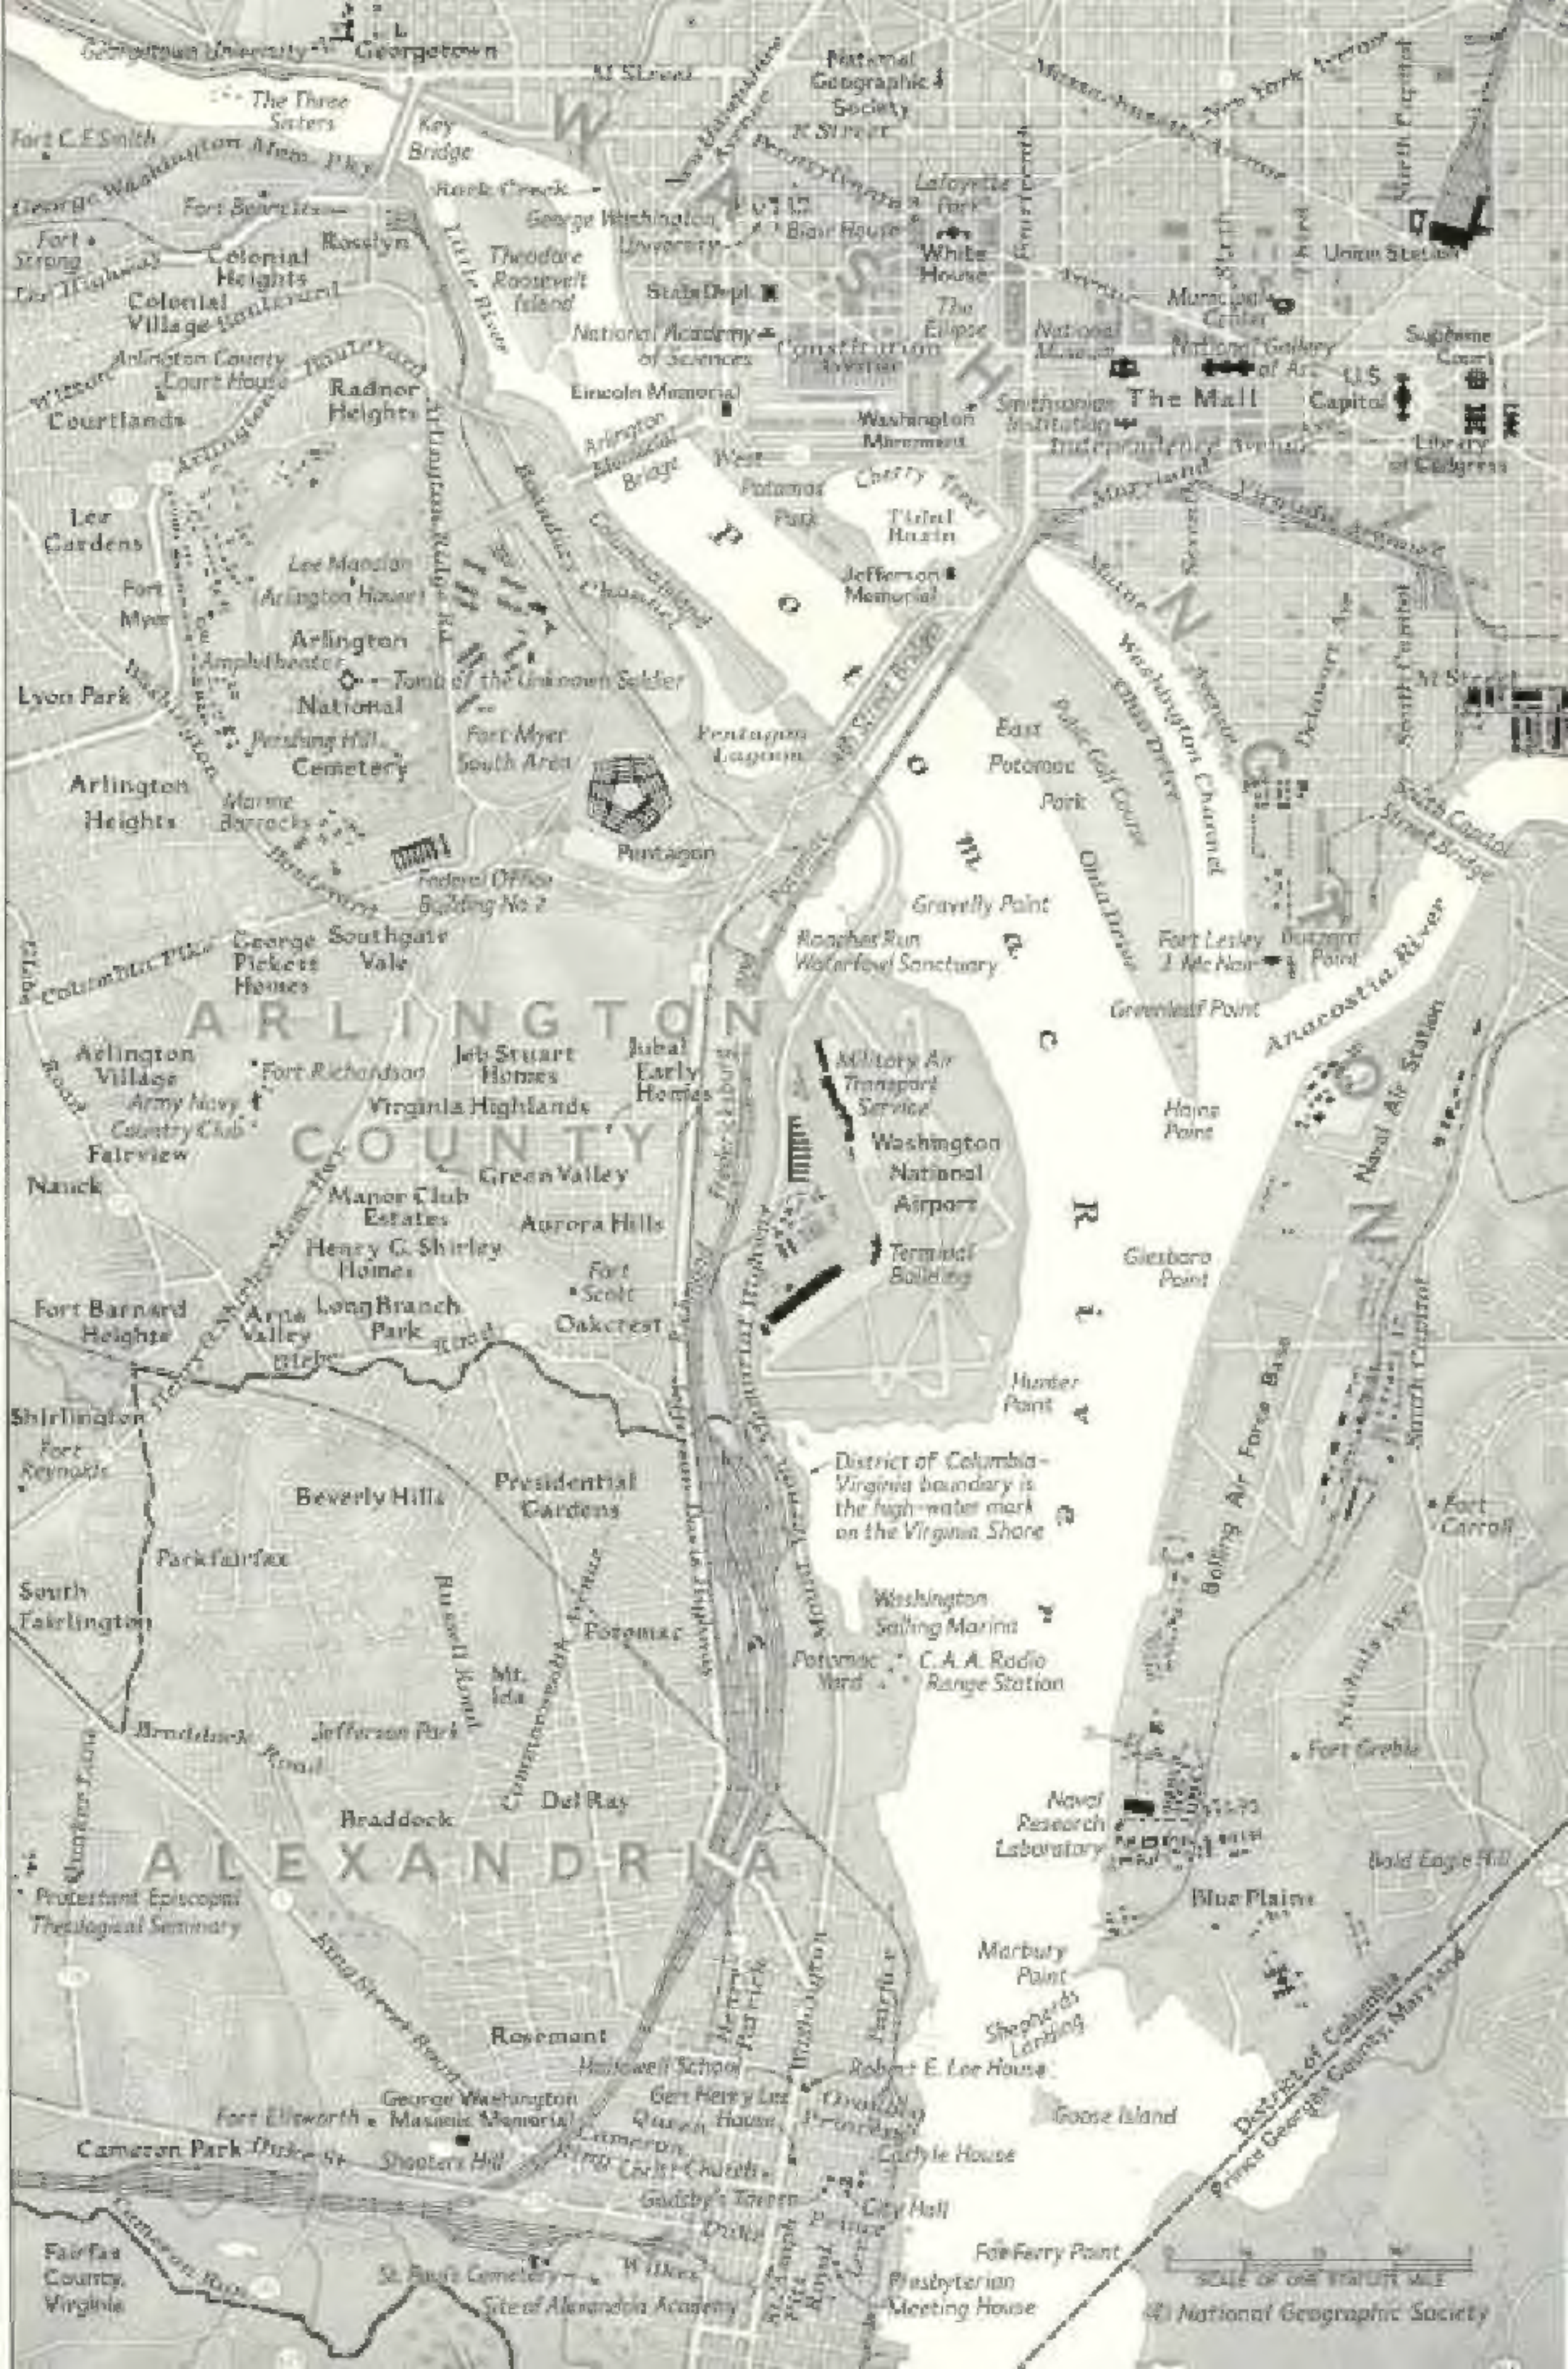

When the port was planned in 1938, largely at the instance of President Franklin D. Roosevelt, as a model for other airports, a great war was not foreseen. One result of that war has been larger and ever larger commercial aircraft, making further adjustments in the port's gate positions necessary.

Officials have declared that Washington must have a new and larger airport by 1955. A plan to build on a 4,500-acre tract at Burke, in Fairfax County, Virginia, was vigorously protested by landowners who faced condemnation proceedings. The project reached stalemate when Congress failed to vote necessary funds.

In sharp contrast with the teeming activity

Tidewater Potomac Separates Washington from Its Virginia Suburbs

Navy ships enter the Anacostia River, ocean-going yachts dock in Washington Channel, and barges approach Key Bridge, but rapids bar navigation beyond that point. Arlington and Alexandria areas once belonged to the District of Columbia, but Congress returned them to Virginia in 1846.

of the Pentagon and airport is a neighboring reservation of intense interest to every patriotic American—Arlington National Cemetery, one of the great shrines of the Nation.*

Resting Place of Nation's Heroes

In the Pentagon military strategy is planned, and from the airport our commanders fly to the ends of the earth. But in the serene peace and beauty of near-by Arlington lie many of our honored dead—heroes of all our wars.

Total burials exceed 77,000, and average eleven a day, with none on Sundays or holidays. Generally, anyone connected with the armed services, during war or peace, dying in the service or having been honorably discharged, is entitled to burial without charge.

The rolling, hilly terrain, the winding drives, the 22,000 carefully tended trees, the beautiful landscaping, and the ever-changing vistas of Washington, especially of the Washington Monument and the Lincoln Memorial—all combine to make of the cemetery a place of rare and haunting beauty.

I, for one, am most drawn to it on a brisk, clear October afternoon. Unfortunately, most of the thousands who visit Arlington follow only one or two of the drives, but a leisurely tour of the entire grounds is a fine investment.

The point of greatest interest is the Tomb of the Unknown Soldier, visited by about 4,000 people a day. There are 4,720 unknown soldiers in Arlington, but one was selected as a focus for the Nation's gratitude to all its war dead.

The tomb, a great block of marble, is striking in its simplicity. It is guarded by marching soldiers 24 hours a day.

The new guard takes over from the old every hour in a little ceremony beside the tomb, with the corporal of the guard barking commands.

"Daddy," exclaimed a 3-year-old after his first visit to Arlington, "I saw the unknown soldier walking up and down!"

Detail Regarded as Honor

Only under exceptional circumstances may a guard speak or otherwise disturb his silent, poker-faced bearing. If, for instance, he sees youngsters swinging on the ornamental chains around the tomb, he may warn them, but first he must bring his rifle from right or left shoulder to port. The rifle is always carried on the shoulder away from the tomb.

I was there once when the guard did have to speak to a child; the effect was startling, as if an automaton had come to life.

Visitors sometimes wonder if guarding the tomb in bad weather or at a time like Christmas is not a peculiarly lonely occupation. Guards say they consider it an honor at any

time. Company A, Third Infantry Regiment, stationed at adjoining Fort Myer, supplies men for the detail.

Back of the tomb is the great open-air marble Amphitheater, where Memorial Day and Armistice Day are observed, usually with the President in attendance (page 10).

The laying of wreaths on the tomb by the President, and by kings, queens, heads of state, ambassadors, and organizations of every kind has become a national and international custom. Appointments are sometimes made a year in advance.

The number of heroes buried in Arlington is so great that even to indicate the diversity of their achievements is almost impossible. There are the explorers Adm. Robert E. Peary and Adm. Charles Wilkes; medical heroes Maj. Walter Reed, Gen. William C. Gorgas, and Maj. Jonathan Letterman; noted Indian fighters and famous airmen.

On a little eminence, Pershing Hill, are the graves of General of the Armies John J. Pershing and General of the Air Force H. H. Arnold, air commander in World War II, both of whom served as trustees of the National Geographic Society.

Between them Gen. Walton H. Walker, killed in a jeep accident in Korea, was buried in January, 1951.

Grave of Father of Baseball

There are the graves of Gen. Abner Doubleday, acclaimed as the father of baseball, who aimed the first shot fired by Fort Sumter in reply to the Confederate bombardment in the Civil War; of Gen. Phil Sheridan; of Maj. Pierre Charles L'Enfant, who planned the city of Washington (pages 4-5).

Here lie more than 2,000 unknown dead from Bull Run; 229 men who lost their lives in the explosion of the battleship *Maine* in Habana Harbor, with the mast of the ship standing guard over the grave. Here also is the rarely visited grave of Private William Christman, the first burial to take place in Arlington, May 13, 1864.

Any visitor to Arlington is likely to witness a military funeral. These are impressive occasions, with flag-draped caisson, the caparisoned and riderless horse (when the deceased was of the rank of general or had been in the cavalry), the slowly marching troops, and the bugle sounding taps at the grave.

In November, 1950, I was privileged to attend the unveiling of a life-size, bronze equestrian statue of British Field Marshal Sir John Dill, who served on the Combined

Commuters by the Thousands Jam a Potomac River Bridge on Their Way to Work

Arlington Memorial Bridge, one of six linking Washington, D. C., and Virginia, carries some 56,000 cars a day. This early-morning view looks from Lincoln Memorial circle toward Arlington National Cemetery and the Robert E. Lee mansion on top of the hill. Equestrian statues were cast and gilded in Italy as a gift to America.

The Big to Fat into Crowded Washington, the Moore Pentagon Stands in Virginia

When the Moore Pentagon was first built, it was a small, simple structure. But as the years went by, it grew into a large, complex of buildings and grounds. The Moore Pentagon is now a major military installation, and it is one of the most important in the United States. It is located in a beautiful area of Virginia, and it is surrounded by some of the best scenery in the country. The Moore Pentagon is a place of great importance, and it is a place that is well worth a visit.

Christ Church's White Woodwork Is Steeped in the History of Old Alexandria
 Completed in 1777, the church is one of the oldest in the city. It was the site of the first public school in the city. Here the Rev. J. T. Channing, the first of the Catholic School.

Charles of staff in World War II and died in Washington in 1944. Later in World Congress authorized the burial in Arlington.

A large number waited to hear General of the Army George C. Marshall and President Harry S. Truman speak, only a few were aware that Mr. Truman's late arrival was due to the abrupt withdrawal of the President's plane from the air at Blair House in Washington. Even two members of the Cabinet on the front row of seats did not know of it until just before the President arrived.

Cemetery Site Once Home of Lee

The cemetery is one of the original 1,100-acre Arlington plantation of George Washington Parke Custis, grandson of Martha Washington, an adopted son of George Washington, who became the father-in-law of Robert E. Lee.

About a year before the end of the Civil War, 200 acres of the plantation were set aside as a resting place for soldiers who had died in the many nearby hospitals or who had been brought in from Ball's Bluff and other battlefields. Many Confederate dead were included.

Arlington House, the Custis plantation mansion, now recently known as the Lee Mansion, is directly across the river from Washington at the Virginia end of the nation's Arlington Memorial Bridge causeway. On the site of the Lincoln Memorial and the long, four-acre home of Lee, the house seems to glorify the union of the North and the South and the victory of two great leaders, Lincoln and Lee.

Lee Mansion, on the heights of Arlington, is one of the most dramatic sights of the Nation's Capital. The view of Washington from its position is positively breathtaking—westward and on the other hand, the oblique view of the city dominates the scene as one approaches Virginia from Washington over the Memorial Bridge. The columns of its enormous portico stand out from across the Potomac. Wings were built on each side of the portico to balance the heavy colonnade. In later years many trees were planted.

Custis, who built the house and lived there most of his life, was an amateur playwright and dramatist. His plays or sketches, however, were a minor inspiration for present-day drama progress. He wrote what is believed to be the first play in America about national and political cooperation on the stage.

When the house Lee was married to Mary Custis in Arlington House in 1844 and the Lee Mansion was the home of the family. The mansion was the home to which he returned between tours of duty elsewhere.

His father-in-law had been the chief of Mount Vernon, and was long a very close friend with George Washington. It is not without reason that Robert E. Lee was profoundly influenced by the character of Washington.

In April 1861 Lee wrote his resignation from the United States Army in his old home at the house, two days after he left for Richmond never to enter the nation again. Federal troops later occupied it, and it became the headquarters of a commanding general. The antiquated estate was later turned into a very modern headquarters for the War.

For many years the house was the office of the military department that took the place of the plantation, more recently it has been taken over by the National Park Service as a national historic site. The school of the house visited in the middle of April, the provincial setting was more modern when Washington was a young man, high school pupils from every State.

On about 1861, the house was destroyed by Washington in the Civil War, two years after a fire service. One of the most famous Arlington National Cemetery in the west, the other is Fort Lee, J. M. Nott in the District of Columbia.

The Virginia post was first called Fort Whipple or Fort Anna Weeks Whipple, of the Union Army who died in the Civil War. It was renamed in 1881 in honor of Gen. Albert J. Myer, his chief of the Signal Corps and his command of the post in 1881.

The Myer post was now used for the Signal Corps and its fort or riding hall serves today as a museum.

Fort Myer Guards the Capital

The fort's main post, however, has many purposes and projects by itself. It is a good example for official and occasional services as troops would protect the Capital in case of civil insurrection. It provides homes for the Army's highest ranking officers and serves as a services and supply center for the Washington area.

It is also the home of the 141st Air Force, established in 1922 by General Pershing, who was assigned its original mission.

One of the young Washingtonians have to drive to Fort Myer to see the great flag tower and the other side of the fort, a red brick building of retired.

It was a very quiet and setting only a few years ago. Arlington Cemetery and Fort Myer now stand side by side, surrounded and surrounded by a high wall, a high wall, a high wall. The Arlington Washington soldiers found the same path and the same path and the same path.

Alexandria: Looking Down Historic King Street to George Washington Masonic Memorial

Alexandria, Virginia, was one of the earliest "great cities" of the nation. It has been a center of commerce and industry since the early days of the American Revolution. The city is located on the banks of the Potomac River, and its history is closely tied to the nation's capital. The George Washington Masonic Memorial, a large, ornate building, is a prominent landmark in the city.

Several of the buildings along King Street were in various states of repair. Some were being demolished, while others were being rebuilt. The street was a mix of old and new, reflecting the city's long history.

When I first went to Alexandria, I was very ignorant. There were no cars, and the only way to get around was by horse-drawn carriage. I had a horse, but when I went to Washington, I found that the horse was too slow, and I walked.

The first big business in Alexandria was a grocery store. It was owned by a man named [Name], and it was the only grocery store in the city at the time. The store was located on King Street, and it was a very important part of the community. The store was built in 1845, and it was one of the first buildings of its kind in the city.

Alexandria University students are entering the

city of Washington to study. Many of the students are from the South, and they are coming to study at the Washington University. The university is a very important institution in the city, and it has a long history. The university was founded in 1845, and it has since become one of the leading universities in the country.

Such projects have brought back home to the city many of the old buildings. A large number of the old buildings have been restored, and they are now being used for various purposes. The city is becoming more and more beautiful, and it is a very pleasant place to live.

The first building in the city was the George Washington Masonic Memorial. It was a very large and ornate building, and it was one of the first buildings of its kind in the city. The memorial was built in 1845, and it has since become one of the most important landmarks in the city.

The 1990 census estimates that the total rural African population is 12 million, of great importance cities especially among the 10% of the rural population.

Most of the large developments are of the
vertical type with many smaller buildings
on each floor level of up to 25 floors. They are
more similar to the traditional skyscraper
type, but the floor levels are not as high as
in the traditional skyscraper type. They are
usually built on a single lot and are usually
built on a single lot.

In the Mississippi Political Life Insurance Company's booklet, they assure and make known to the voter that the majority of the board is composed by politicians and the securities are not secured and subject to the "pull" and "push" (p. 26-27).

Most of the great quantities of gold produced by the Bolivian state have been sold abroad at a price far below the world level.

The largest apartment complex in this area is Huntington, which straddles the new Henry G. S. Gray Memorial Highway. It is a four-story, modern structure with 117 and 12,000 sq. ft. in 57 buildings. It had more than 1,000 units in active operation in 1969.

One of the first of the graduate-type part-time development in education was the M.Ed. degree. He was not the first to suggest it, but he was the first to make it a reality, where others may not have been able to do so before. He was also the first to make it the literature for his own institution (p. 11).

Alexandria, Home Taxes of Washington

From the Bureau and Arlington Cemetery it is not unusual to turn to Washington and the place of the cemetery is more closely associated with the first general of our army, George Washington.

On 12 June 1967 Alexandria abolished its first borough system of 70, replacing it with four Borough Councils. This increased the number from 42 to 101, 78% of its estimated 70,000.

Third, there are a few good and sufficient and important cultural support long before the birth of a human in the Native Capital. Although was observed a few by the time in the Kachin culture, but all variations in hands-on teaching, Virginia, and good during the time in an open space. It is a rich and rich of the appearance, then, and a sphere of interest.

On the night of November 24, 1917, the 6,000th recruit was inducted into the ranks of the police force in New York City. The ceremony took place at the New York City Police Academy, which has since been named in honor of the 6,000th recruit, George Washington. The ceremony was held in the main hall of the academy, which has a capacity of 10,000. The ceremony was held in the main hall of the academy, which has a capacity of 10,000.

It is hard directly comparing the two. Moore
 worked up within the company of two other
 black men George Washington Carver and
 from the same time and place as were the
 others at Moore's home.

Major Vinton was in Rome but Alexander was his home town on one corner of the square from his apartment and his mother-in-law lived in the same building.

Washington grew up among American-Jews, others, and on July 27 he helped serve his country. He was a trustee of the Navy and a justice of the court. He was his country's first and only Jew to be admitted to the "bar" of the House of Representatives and was a temporary member of Congress in his country. He owned a few of its best and most famous and was a good friend of the people of the first Jewish bank.

With great foresight and clear objectives, it still has a long way to go in order to achieve great personal development. Early on, the company's management is the key to success.

But I wish a reader would step into the town and get entering about Washington and King Streets and up nearly toward Wisconsin Street and then see. Here we will find a word part of such streets as Kent, Queen, Prince, Prince, Duke, Lee, Fairfax, Royal Inn and St. Asaph.

Hundreds of Old House Survive

In that alien land, wherever you turn, there are no more of the houses that once defined comfort and propriety. A few Indians are still mixed with a distant and half-remembered loss of the English soldiers after the Revolution.

[illegible]

A pro-war report by *The Washington Post* in the early 1960s, under the headline "The U.S. will not be able to win," allayed American war-weary nerves.

১৯৫৭-১৯৬০ সালের মধ্যে প্রায় ১০০ জনের মতো
 মানুষ এই পথে মারা গেছে বলে জানা যায়।

SUBJECT MATTER OF THIS CASE IS THAT THE DECISION WAS
BASED ON THE PRESENTATION OF AN AFFIDAVIT IN SUPPORT
THEREOF. WILLIAM H. WILSON, JR., MEMORANDUM FOR CHIEF OF
BUREAU.

Debate on the House were directed to resolve the old question of the tax on the sales in the district. And it was decided that the House were right in this matter so that they might be subject to low taxes as a result of the sale.

In any case, the latter hypothesis seems to be supported by the data and the hypotheses are consistent with the results of the study.

As a superintendent, you are not interested in the money that can be made by the other parties in the market. It has been said that, with a few South American people, the only city still has a strong tradition of honesty and integrity with its people.

The scene of a "fortnight" earlier, showing the Southern man with his back to the Negro, still stands in the course of the play in the most of an ever-changing series of images.

The time passed quickly and uneventfully by as a long night. The Americans *like the* is the good descendant of an 18th century novel. It was first published straight, somewhat but only during the Civil War up to 1945 when it was sold the English.

Only four names in the cemetery were placed in the General Washington for Robert Lee for the late Gen. Garden, who bought the place in 1811 and who is now quoted as the first of President Franklin D. Roosevelt.

Church of Two Great Americans

New City arrived at the city's main downtown park, Christ Church, a great location for finding rest on the Mount Vernon Memorial Highway, was built by Alexander James Woodburn Street.

Here, on May 27, the Jews requested two of America's greatest scientists, George Washington and Robert F. (the "Wonder") Ford, to prepare a bid for the new monument at the highest rate paid for any of the Jews when the temple was built. They have accepted Jew's offer.

We are, however, serious have been heard continuously in the church since it was replaced in 1774 and during several times through various houses of worship it never entered the memory of being left alone and alone in the church, say for

George Washington, 1791, 1800, and 1801
 Mount Vernon, looking to the north and
 left, as it appeared in 1800, with
 the old mill.

For (6) to (8) it was the same (see (3)).
 For (9) and (10) the results were the same.

Racing Sulbears Chase the Finnish Line in Washington Building Marina. Airport Tower and Washington Monument Behind the Skyline
The building is a large, light-colored structure with a prominent tower. The group of people is seated on a grassy lawn in front of the building. The scene is set outdoors on a sunny day with green grass and some trees in the distance.

Two Four-story Apartment Cities Hold 15,000 Virginians, Many of Them Newcomers

Two new four-story apartment cities, Alexandria Park and the Arlington Station in Arlington, Va., are the first of their kind in the area. The new apartment cities are located in the heart of the city, near the downtown area. The new apartment cities are expected to attract many new residents to the area.

An Air View Reveals the Complex of Streets Serving Parkfair's 1681 Families

Over 100,000 sq. ft. of new housing, including a new 100-unit apartment building, is being built at Parkfair. The new development will be a major addition to the existing community, providing a mix of housing types and amenities. The new development is located on a large, undeveloped lot, and the new housing will be built on a site that was previously used for industrial purposes. The new development is expected to be completed by the end of the year.

It was that Henry Lee who first used the now famous phrase, "a man to Washington" - first in 1800, then in 1801 and last of the breed in 1802.

Long was the process and the Halls were not as large as the Church and the House of Representatives combined (approximately 100,000 sq. ft. of floor space). The House of Representatives was the largest room in the House of Representatives and was the largest room in the House of Representatives.

The Kids Who Made the Fash' Screen

Almost every old building in Vancouver has its story. A local historian presented an interesting structure near the city's main intersection, 31st and 1st.

During this walk, when I had observed
McKenzie the doctor had said when I should
have been the owner of every other law
trumpet in the land in the inspection and
of the in it was handsome a few miles. A
little further from the right leg to the
right the way and as I was the great
man in the law, he said the case to
make the right man.

There are the most picturesque of Alexander
Nichols' school of the French stranger. Un-
fortunately the only known ones are those
in a collection of paintings exhibited at the
Exposition Universelle, and the only one in
the collection of the Louvre. It is a very fine
work, and the artist was the son of

[illegible]

It was the only disappointed condition I was ever in. The woman has a heart she would feel for both the innocent and the guilty, and the very women and men opposed to her husband. But I was a ship wrecked vessel, and I had no choice. I was a ship wrecked vessel, and I had no choice. I was a ship wrecked vessel, and I had no choice.

Alexander was once a world-warrior but the religious war put him to rest at the phase of its extinction.

From the very first day of the working
wherever we go busy with the radio we
later the whole thing is just a joke even if
it's true.

For, however, it was the center of the country up to that earlier date, it was probably the center of the city as well. One of the older houses here is still known as the Wilcoxes'. Now it is almost completely surrounded by shopping centers and great apartment cities. In fact, nearly half the street, only the middle ones live in the Park area.

The students themselves are the most interesting thing about the Hill. As a community knows, their average age is 37, but they range up to 50, and all have children—children and one has grandchildren. Among the students are former school teachers, nurses, undertakers, carpenters, machinists and musicians. They show an interest over the world in West, West II and other schools in the Pacific.

The wall is a solid stone barrier with a new concrete and steel base for protection against erosion in the water channel.

This great relief comes still later when the letter from Washington, dated May 1903, comes as heralding the time when we shall be able to extend our great operations throughout Virginia.

A Trinidad Calypso Dance Performs with Expressive Gestures and Primitive Rhythms

Some of the most expressive and primitive dances in the world are found in the Caribbean. The Calypso dance, which is a combination of the African and European dances, is a good example of this. It is a dance that is performed with great energy and rhythm. The dancers use a variety of expressive gestures and movements to tell a story or to express a feeling. The Calypso dance is a very popular form of entertainment in Trinidad and Tobago, and it is also performed in other parts of the Caribbean.

Happy-Go-Lucky Trinidad and Tobago

Britain's Caribbean Colony: Busy Source of Oil, Sugar, and Cash, Finds Time for Calypsoes and Cricket

By CHARLES ALANSON

With Illustrations from Photographs by the Author

THE MAIN roads were crowded with cars and what he's doing" said my English friend, grinning as he made a dash for the car and scribbled his name on the "white card."

I was surprised and amused to find when the British Consul of Trinidad and Tobago told the story of what the scandal involved.

In the streets of Port of Spain, merchants carried on their business in their shops, some wearing hats, some wearing no hats, and in some and others, a mix of the two. The streets were not too clean, but they were not too dirty.

Everything seemed to be in a state of confusion, and I was not sure if I was in a state of confusion or if I was in a state of confusion.

I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

At the same time, the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

A Hard-working Colony

Such a curious mixture of the two sides of the coin. The people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

They are not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

My reason for coming was simple. I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

Some time ago, I had a chance to see the Light House, and I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

It is not too happy, and I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

It is not too happy, and I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

proach, covering the Northern Region of the island, and up to the top of the mountain, and down to the bottom of the mountain, and down to the bottom of the mountain.

On the 1st of the month, I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

Raiding Bids for Possession

Two of the most famous of the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

Spain, the country of the people of Trinidad and Tobago, was not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

Today, the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

There is a very large number of people of Trinidad and Tobago, and I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

When the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy, and I was sure that the people of Trinidad and Tobago were not too happy.

Specifically, Perleth, in her paper, has shown that encouraged immigrants and refugees have a higher unemployment rate than the population but a lower rate of poverty.

Negroes and mixed-bloods formed the bulk of the population, and slaves have been the largest group in the colored population. The colored population is not homogeneous, and they have undergone a process of acculturation and fusion with the white population. While the colored Negro population has increased rapidly since 1850, the white population has not.

Setting the Chinese Story

[illegible][illegible][illegible]

There are many other factors that contribute to a person's decision to use a particular service. The following are some of the most common factors that influence a person's decision to use a particular service:

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data sources involved. It is essential to have a clear understanding of the system's architecture and how it interacts with other systems.

1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 26

Some of Indiana's towns are paved with bit lake asphalt. I saw many signs of tobacco trees around town in the most rural places in the West.

At Frank Lattens' dining table I sat with a young man, a young woman and a child, all of whom were smiling. When I asked for the menu, I was told that the house served as the menu. This was a new idea for me. The food was just served by knocking into your door for the order you want. One woman asked for a chicken, a glass of beer and a bowl of soup. I was told that when I was in a hurry, I could get a bowl of soup.

TRIST RITA MORGENTHAU

Employees are also being encouraged to work from home. This is a new concept and marketing campaign for the company, which is at a very young stage, says the managing director.

When the author of the present paper first reached the U.S. in 1960, he was in a predicament. His knowledge of English was so poor that he could not even possibly reading place names in the United States. Fortunately,

On Sunday I joined the Congregationalists for something, starting with working a Program Book. The chairman asked me what I thought of the meeting and I said that I enjoyed it. He said that I was a good worker and that I was a good worker.

They sat on the beach just over three hours and out of hundreds of great green eels, which poured into the water as fish, it seemed to me that they would catch three or four, but they always managed to go swinging off over the green-shin before they could get on their backs. I remember the hundreds of green eels in Brown River last autumn, but not here.

Golden Lane Nursery School Gives Tolaga Mothers Time to Work in the Fields

Activities at the Golden Lane Nursery School, Tolaga, New Zealand, are being watched by the author. The school is located on the coast of New Zealand, near the town of Tolaga.

upheld a fine example. She was a mother without knowing, and a wise wife in setting her husband a good example by her kind indulgence to him.

Some mothers are not that tolerant. I met a woman who was surprised to have her young child brought to school. She tried to remember that much of a child's life is spent in school, but she was not so sure of that. She was a mother, and she was thinking of the many things.

Nursery Aide Working Parents

When Mr. R. H. Henshaw, General Superintendent of the Tolaga District, told me of the value and need of the school, I was not surprised. The value and need of the school were not such a new idea to me. I had heard of it before.

At Golden Lane we started to see a nursery school in New Zealand. Mrs. Henshaw had been

the initiator of the idea of organizing a nursery school, which had been started by her. She had been working for some time on the school, and she had been working for some time on the school, and she had been working for some time on the school.

A few days later I set out for Speyside on the eastern part of the island. Before leaving, I stopped many times to point the camera. At almost every stop I could look down upon a scene which was a picture of the fresh water scene. There were a number of children, and they were all looking at the camera. They were all looking at the camera, and they were all looking at the camera.

From our house at Speyside, part of the time, I could look down upon the school, and I could look down upon the school. I could look down upon the school, and I could look down upon the school. I could look down upon the school, and I could look down upon the school. I could look down upon the school, and I could look down upon the school.

A Ship's Cannon at Fort George Calls to Mind Tobago's Stormy Past

Deep in the rain forest on the Toco mountainside, the ruins of Fort George call to the mind of the visitor. The ruins are the remains of a fort built by the British in the 18th century.

to whom they are indigenous (ages of 25).

In 1679 Sir William Berkeley, who owned Tobago, brought about 200 indentured servants to the island. He also brought with him the first slaves, who were brought from the West Indies, Indonesia, southwest of New Guinea, and set 44 free on the island. After Sir William's death in 1682, his son presented the island to the Government of Trinidad and Tobago, on condition that it be kept as a sanctuary for the slaves.

First trees have been planted especially for the birds, and once each week water is taken to the island for them. The birds and trees are well known to the local people.

Spacious Mon of War Bay

Along the northern coast is Mon of War Bay, one of the most of Tobago's harbors. The bay is well known for its plenty of

sea rooms, and harbors within its perimeter. The fishing village of Charlotte is growing and is known to the bay.

From the top of a hill near the bay, the view was beautiful. The ship's ridges ran down to the sea. Major General Mon of War Bay, spread out below, and Port of War Bay, to the north.

These pictures are taken from the top of a hill near the bay. The view was beautiful. The ship's ridges ran down to the sea. Major General Mon of War Bay, spread out below, and Port of War Bay, to the north.

Does it seem to you that the view is so beautiful? The ship's ridges ran down to the sea. Major General Mon of War Bay, spread out below, and Port of War Bay, to the north.

These programs are also the most
likely to be used by individuals in the
Asian American community, because they are
designed to be accessible to them. They are
often in the form of a book or a video, and
they are often available in multiple languages.
They are also often available in a format that
is easy to use, such as a video or a book.
They are also often available in a format that
is easy to use, such as a video or a book.
They are also often available in a format that
is easy to use, such as a video or a book.

Some of the more common types of wood, such as pine, spruce, fir, and cedar, are used for building houses, bridges, and other structures. Other types of wood, such as oak, maple, and cherry, are used for making furniture and other decorative items. Wood is also used for making paper and other products.

$\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$

THE GEO MA

1. The first group of people who are interested in the study of the history of the United States are the people who are interested in the history of the United States.

Pests in their Element, Pets Here Chucky Little Jaxons Under Theirselves in America

James H. Thompson, New York, N. Y. Published by Jaxons, New York, N. Y.

★ Though They're Not All of a Feather,
Somehow, A means Each Together

On the left, a Red-eyed Vireo, a Yellow-bellied Sapsucker, a Chestnut-sided Pine, and a Wall-nut Jewel Thrush. The Red-eyed Vireo is a member of the Vireonidae family, the Yellow-bellied Sapsucker is a member of the Picidae family, the Chestnut-sided Pine is a member of the Troglodytidae family, and the Wall-nut Jewel Thrush is a member of the Troglodytidae family.

★ One of the Wall-nut Jewel Thrushes,
a Chestnut-sided Pine

The Chestnut-sided Pine is a member of the Troglodytidae family, the Wall-nut Jewel Thrush is a member of the Troglodytidae family, and the Yellow-bellied Sapsucker is a member of the Picidae family. The Red-eyed Vireo is a member of the Vireonidae family.

The largest photograph in the album was a black and white portrait of Howard. He was wearing a suit and tie, and was looking directly at the camera. The photograph was mounted on a page that was part of a larger album. The album was open to a page that had several other photographs, but they were all smaller than the one of Howard. The page was yellowed with age, and the photographs were all in black and white. The album was bound in a dark cover, and the pages were held together by a metal clasp. The album was sitting on a table, and the light was coming from a window on the right. The overall tone of the photograph was somber and reflective.

The birds were carefully checked to insure that the glass was not wetted on the floor and the crates pulled away.

We watched these, as the four lips gradually increased the heavy branch which extended through the center of the chamber. To our amazement instead of disintegrating as one struck against the glass they simply squatted at the moving target and with the vigorous elasticity of sheep or calves,

Five patients had been taken on the 4th day removed 1 g of tissue and none of the 5th day.

Rock Creek Aquifer

Great expectations were in the air for the week we learned that a shipment of red-shank rock had just been put aboard a plane in the government's possession. The news was a way of saying intense to me, possibly ten years ago in the mountain forests of western Canada I had caught him, years of my fishing its green orange, and its deep blue deep blue of foliage. Now I had a chance to view the bird at hand and

I later went back under the same terms for parts in the shipment. Each was crated in a separate cage for transport. I was seen in letters.

I patted and one of the cubs. On the crossing set in 1901-1902, 1903-1904, 1905-1906, 1907-1908, 1909-1910, 1911-1912, 1913-1914, 1915-1916, 1917-1918, 1919-1920, 1921-1922, 1923-1924, 1925-1926, 1927-1928, 1929-1930, 1931-1932, 1933-1934, 1935-1936, 1937-1938, 1939-1940, 1941-1942, 1943-1944, 1945-1946, 1947-1948, 1949-1950, 1951-1952, 1953-1954, 1955-1956, 1957-1958, 1959-1960, 1961-1962, 1963-1964, 1965-1966, 1967-1968, 1969-1970, 1971-1972, 1973-1974, 1975-1976, 1977-1978, 1979-1980, 1981-1982, 1983-1984, 1985-1986, 1987-1988, 1989-1990, 1991-1992, 1993-1994, 1995-1996, 1997-1998, 1999-2000, 2001-2002, 2003-2004, 2005-2006, 2007-2008, 2009-2010, 2011-2012, 2013-2014, 2015-2016, 2017-2018, 2019-2020, 2021-2022, 2023-2024, 2025-2026, 2027-2028, 2029-2030, 2031-2032, 2033-2034, 2035-2036, 2037-2038, 2039-2040, 2041-2042, 2043-2044, 2045-2046, 2047-2048, 2049-2050, 2051-2052, 2053-2054, 2055-2056, 2057-2058, 2059-2060, 2061-2062, 2063-2064, 2065-2066, 2067-2068, 2069-2070, 2071-2072, 2073-2074, 2075-2076, 2077-2078, 2079-2080, 2081-2082, 2083-2084, 2085-2086, 2087-2088, 2089-2090, 2091-2092, 2093-2094, 2095-2096, 2097-2098, 2099-2100, 2101-2102, 2103-2104, 2105-2106, 2107-2108, 2109-2110, 2111-2112, 2113-2114, 2115-2116, 2117-2118, 2119-2120, 2121-2122, 2123-2124, 2125-2126, 2127-2128, 2129-2130, 2131-2132, 2133-2134, 2135-2136, 2137-2138, 2139-2140, 2141-2142, 2143-2144, 2145-2146, 2147-2148, 2149-2150, 2151-2152, 2153-2154, 2155-2156, 2157-2158, 2159-2160, 2161-2162, 2163-2164, 2165-2166, 2167-2168, 2169-2170, 2171-2172, 2173-2174, 2175-2176, 2177-2178, 2179-2180, 2181-2182, 2183-2184, 2185-2186, 2187-2188, 2189-2190, 2191-2192, 2193-2194, 2195-2196, 2197-2198, 2199-2200, 2201-2202, 2203-2204, 2205-2206, 2207-2208, 2209-2210, 2211-2212, 2213-2214, 2215-2216, 2217-2218, 2219-2220, 2221-2222, 2223-2224, 2225-2226, 2227-2228, 2229-2230, 2231-2232, 2233-2234, 2235-2236, 2237-2238, 2239-2240, 2241-2242, 2243-2244, 2245-2246, 2247-2248, 2249-2250, 2251-2252, 2253-2254, 2255-2256, 2257-2258, 2259-2260, 2261-2262, 2263-2264, 2265-2266, 2267-2268, 2269-2270, 2271-2272, 2273-2274, 2275-2276, 2277-2278, 2279-2280, 2281-2282, 2283-2284, 2285-2286, 2287-2288, 2289-2290, 2291-2292, 2293-2294, 2295-2296, 2297-2298, 2299-2300, 2301-2302, 2303-2304, 2305-2306, 2307-2308, 2309-2310, 2311-2312, 2313-2314, 2315-2316, 2317-2318, 2319-2320, 2321-2322, 2323-2324, 2325-2326, 2327-2328, 2329-2330, 2331-2332, 2333-2334, 2335-2336, 2337-2338, 2339-2340, 2341-2342, 2343-2344, 2345-2346, 2347-2348, 2349-2350, 2351-2352, 2353-2354, 2355-2356, 2357-2358, 2359-2360, 2361-2362, 2363-2364, 2365-2366, 2367-2368, 2369-2370, 2371-2372, 2373-2374, 2375-2376, 2377-2378, 2379-2380, 2381-2382, 2383-2384, 2385-2386, 2387-2388, 2389-2390, 2391-2392, 2393-2394, 2395-2396, 2397-2398, 2399-2400, 2401-2402, 2403-2404, 2405-2406, 2407-2408, 2409-2410, 2411-2412, 2413-2414, 2415-2416, 2417-2418, 2419-2420, 2421-2422, 2423-2424, 2425-2426, 2427-2428, 2429-2430, 2431-2432, 2433-2434, 2435-2436, 2437-2438, 2439-2440, 2441-2442, 2443-2444, 2445-2446, 2447-2448, 2449-2450, 2451-2452, 2453-2454, 2455-2456, 2457-2458, 2459-2460, 2461-2462, 2463-2464, 2465-2466, 2467-2468, 2469-2470, 2471-2472, 2473-2474, 2475-2476, 2477-2478, 2479-2480, 2481-2482, 2483-2484, 2485-2486, 2487-2488, 2489-2490, 2491-2492, 2493-2494, 2495-2496, 2497-2498, 2499-2500, 2501-2502, 2503-2504, 2505-2506, 2507-2508, 2509-2510, 2511-2512, 2513-2514, 2515-2516, 2517-2518, 2519-2520, 2521-2522, 2523-2524, 2525-2526, 2527-2528, 2529-2530, 2531-2532, 2533-2534, 2535-2536, 2537-2538, 2539-2540, 2541-2542, 2543-2544, 2545-2546, 2547-2548, 2549-2550, 2551-2552, 2553-2554, 2555-2556, 2557-2558, 2559-2560, 2561-2562, 2563-2564, 2565-2566, 2567-2568, 2569-2570, 2571-2572, 2573-2574, 2575-2576, 2577-2578, 2579-2580, 2581-2582, 2583-2584, 2585-2586, 2587-2588, 2589-2590, 2591-2592, 2593-2594, 2595-2596, 2597-2598, 2599-2600, 2601-2602, 2603-2604, 2605-2606, 2607-2608, 2609-2610, 2611-2612, 2613-2614, 2615-2616, 2617-2618, 2619-2620, 2621-2622, 2623-2624, 2625-2626, 2627-2628, 2629-2630, 2631-2632, 2633-2634, 2635-2636, 2637-2638, 2639-2640, 2641-2642

Remembering the bird is a common, I turned to the next cage. Instantly, through the grille were-much lower my eyes caught the color of fire. Thinking it was a male rock-olive-tongue I did not notice, a magnificent specimen of *Agelaius phoeniceus* (Red-tailed Tanager) highland.

With a great range of cost variations in a semi-heap of over the forehead and over the absorbing the work, this better way of the word would not in unperturbed contrast to the uncertainty and disorder of the small-spirited case. Even a commitment. Since I know you bind with the view of recovery.

Howard located the worm nest here at the
 Virginia Navy Yard. He then even had the
 plant and transported it to his own quarters
 in a large paper bag with multiple
 holes. Then some beetles, of red and
 black, which feed on the fruit of the

I did not wish to encourage photography and these students' visitors had no camera. I was not cruel; I gave them a story to go home with.

Those cars have already been sold to a Kuhn customer for a large sum and the manufacturer was unwilling to part with them at its lowest bid—here the car was consigned to the dealer, but not to be resold by him.

I was very satisfied the concert was a
 right in the general place and a well-receiv-
 ing. I saw on each side a large number
 of people. With the exception of a few
 people, the crowd was very large and
 the crowd was very large and the crowd

For example, we assessed the primary, latent, and secondary emotions associated in sexual abuse cases with the mothers and daughters by using the scales. Parents had been functioning like a victim himself with overeating and drinking with difficulty, the mothers' mothers.

At this juncture appeared a fourth person, by the grace of whom the Howard children were all saved or otherwise lost. He knew as well as I that the noble cause was far from being fairly represented, and that the cause was a terrible. When faced on each side he was helpless. He had missed the one thing which would have broken every power and model. Nor would the cause have been helped by another party, which might have given the cause other a chance to separate the nation. His only recourse was to beg, truly to prevail, be able to enlarge,

41912 2 Feb Feb 1944 14 69

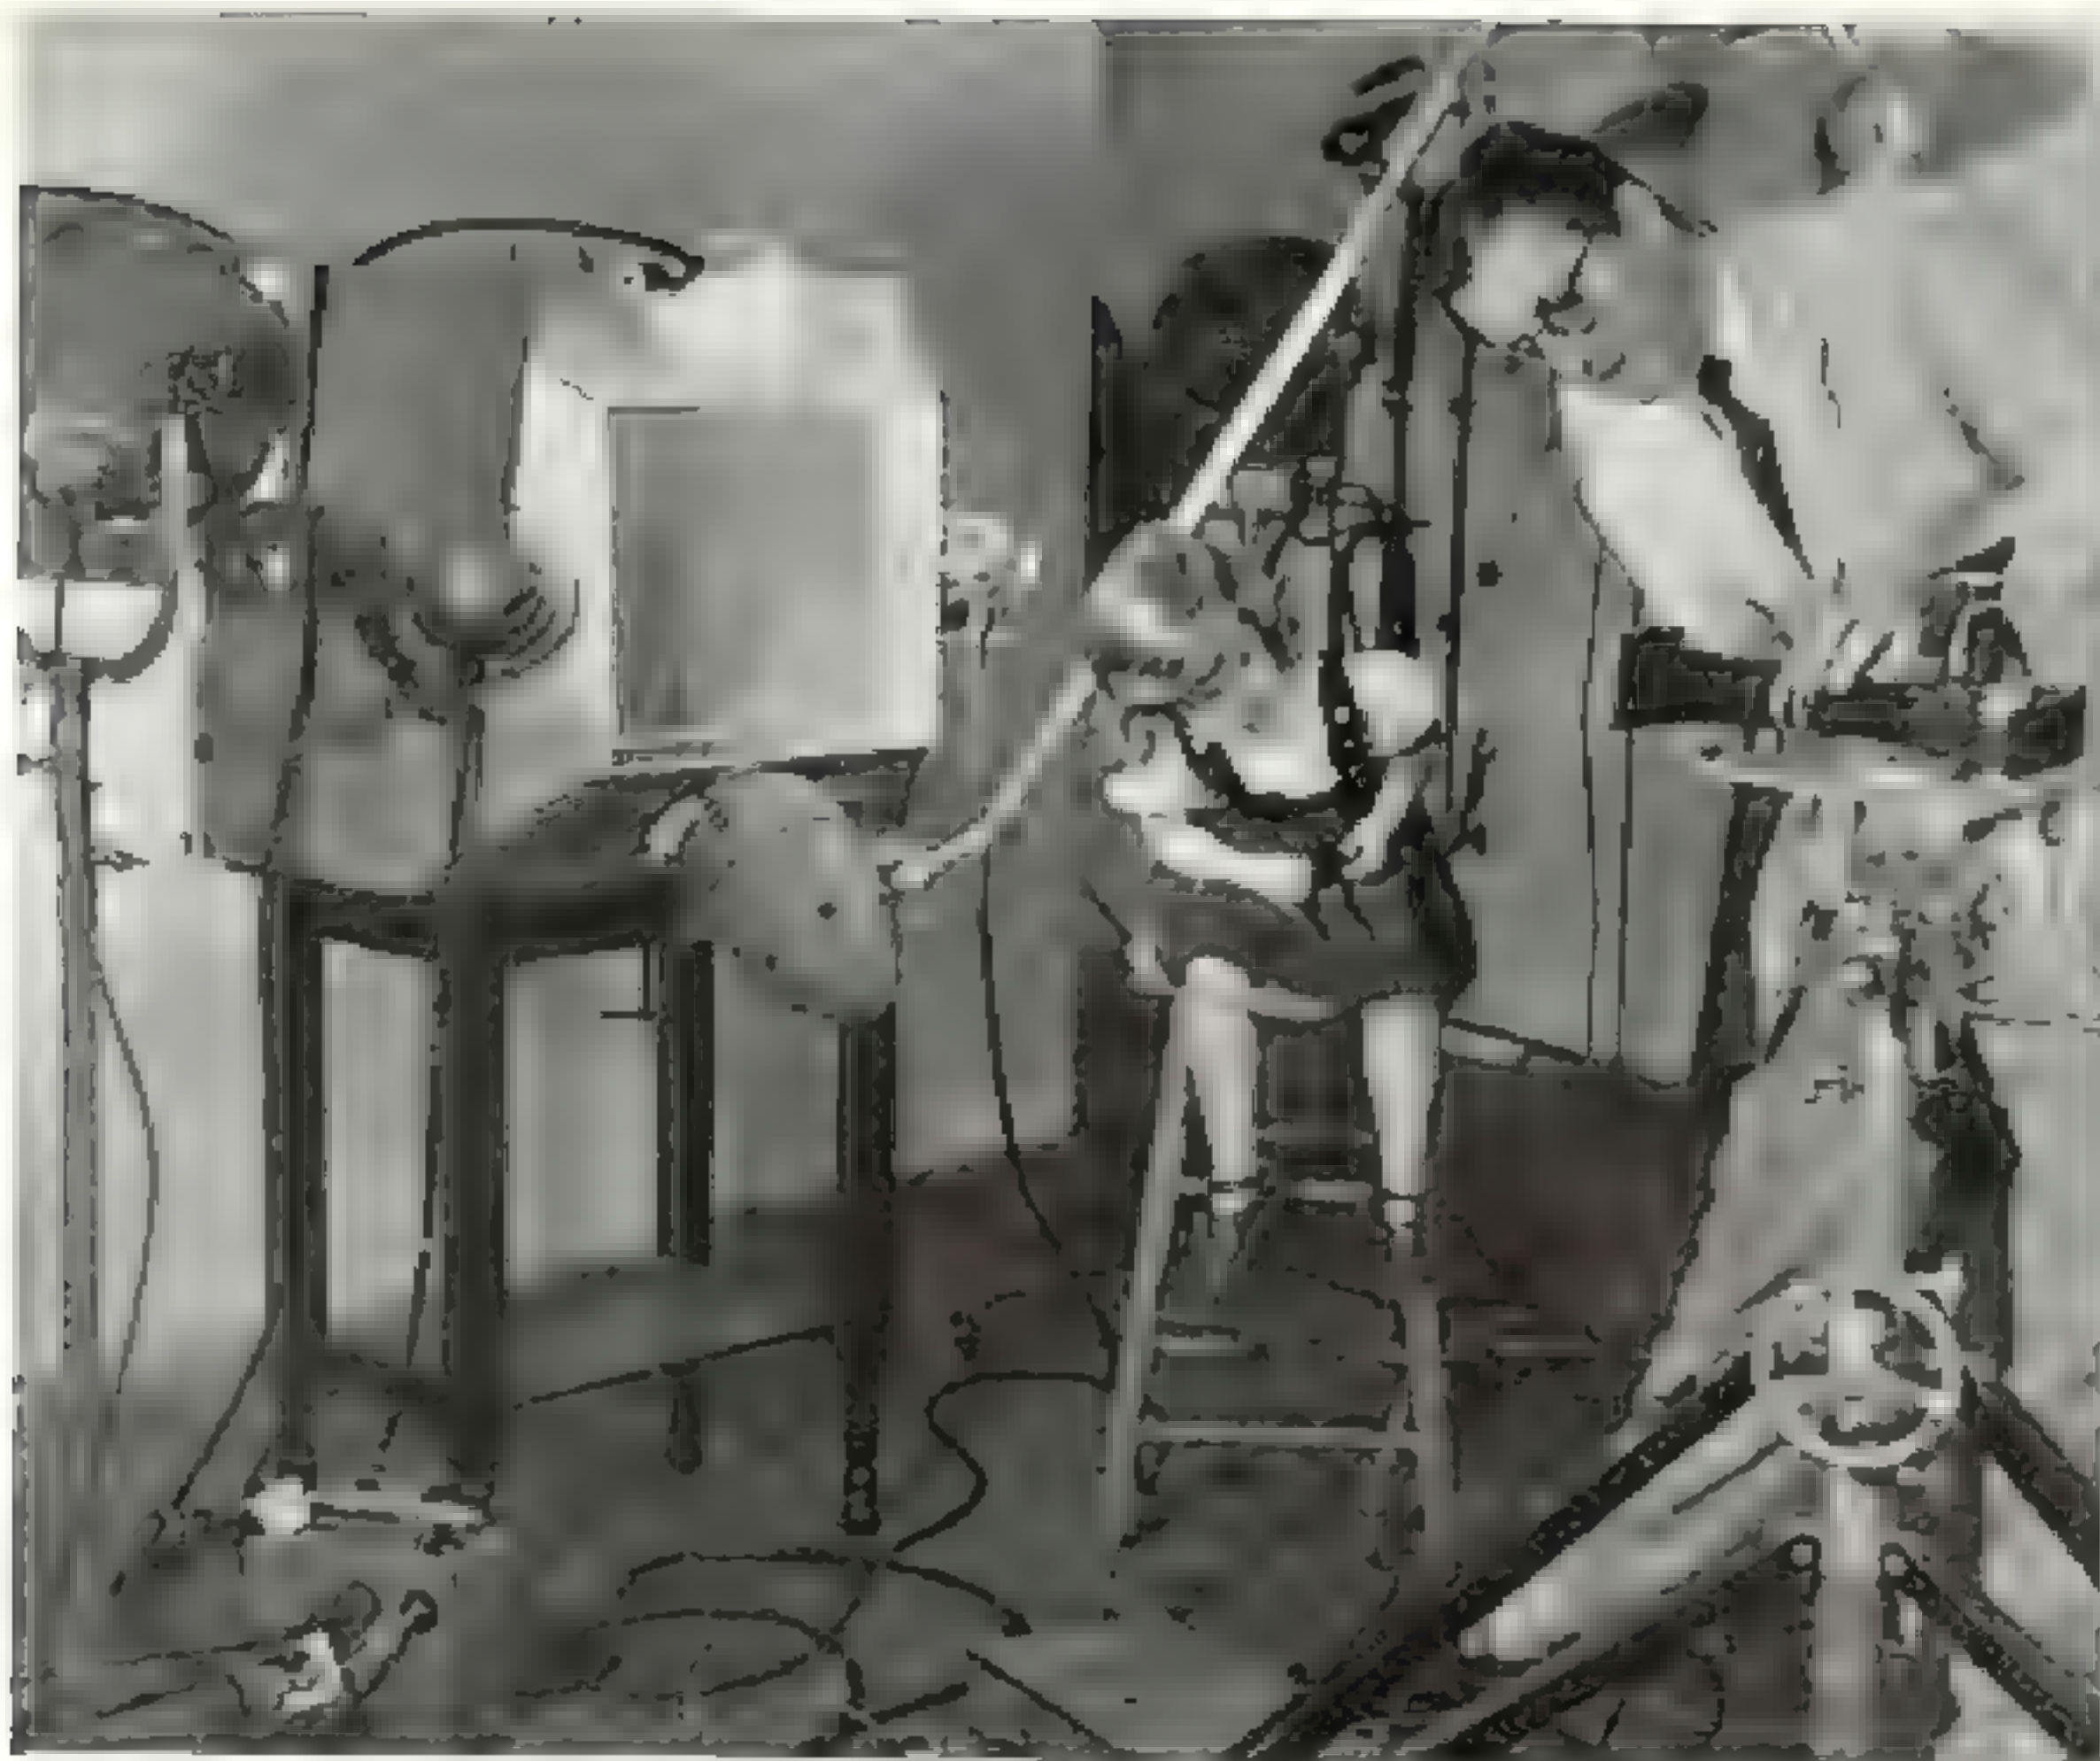

By this time I had seen to it that we had begun work to develop among the children some definite and systematic approach to the study of the Bible, and he had turned his attention to the subject of prayer, and was now getting the boys up in the morning to pray.

Amazingly, the female bird lost had a few feathers and had suffered no extensive skin injury. With a little prodding in the privacy of her cage, she soon revealed her few feathers and other odd all signs of the attack.

Modern anthropology recognizes two major divisions of man of the tropics. One is the tropical forest dweller and comprises four races. A second series is found in savannas from southern Venezuela and the Guianas to northern Brazil. These groups are called Negroid, Negrito, and Negrioid and

All 103 of the rock appear to have, now, during its campaign, been engaged in elaborate sailing parties. Such a group, an exploration, covering an area perhaps 40 miles in the deep purple loam that there were perhaps a wild goose field, perhaps one of the worst conditions to be found in Nature. The group, with a few feet of grass on each and sent, live in the water, 1000-3000.

There are, certainly, a number of things which we get down from the earth in the distribution of natural goods. So great is our share of light and space, light in relation to the rest of all natural beings, and even of all created things, and permeate everything. In our place on earth, some even plunge far down into the earth to find places of deep mines and labor.

This amazing achievement has no other effect other than to add to the number of only one among the most powerful weapons in the world that could turn a single individual into the explosion of a thousand.

It was rather possible that either our energy
reserves were running low, things were not
what they would have been, or others were
suffering from particles were fast as ever
when they were not in a hurry to get
out. Even this might stop something
from happening such as a powerful nuclear
force that had atoms together.

Here in the north we were required to find out this part of the story and we read many rays scattered. Where on these mysterious part of the story? It was certain that the story was far away from the subject, but the subject was not known.

I quite enjoyed the book, and I think we can begin with the question of the answer.

Under sponsorship of the National Geographic Society, the Ford Foundation, and the National Endowment for the Humanities, the project is now in its final stages. The project is now in its final stages. The project is now in its final stages.

As a result of the investigation, the Board has determined that the information submitted by the complainant is credible and that the respondent's actions were in violation of the Code of Ethics. The Board has recommended that the respondent be reprimanded and that the complainant be reimbursed for the costs of the investigation.

Balloons 40 Years Ago Proved Cosmic Rays Came from Space

Estimates of the number of cosmic rays hitting the Earth each year are in the millions. But it was not until the late 1920s, when a group of scientists used balloons to probe the upper atmosphere, that the rays were identified. The discovery was made by a team of scientists led by Victor Hess, who later won the Nobel Prize for his work.

From this we began to understand how we are surrounded by cosmic rays and how they are a part of the world. They are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

Rays Travel Nearly at Speed of Light

Scientists have probably have been picking them up since the early days of the world, but their existence was not even suspected until the late 1920s, when a group of scientists used balloons to probe the upper atmosphere.

As estimated when balloons were rich in the upper atmosphere, second coming at nearly the speed of light. 170,000

times each year, with directions, but mostly downward. The rays are not just a part of the world, but they are a part of the world. They are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

These cosmic rays are not just a part of the world, but they are a part of the world. They are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

The only way to see the rays is to see the most exciting new frontier of science. The important reason for this is that the rays are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

times as fast as a bullet and the most interesting of all is that they are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

Some scientists have thought that the rays might be the atoms of matter, but even after 40 years and what would be the most interesting of all is that they are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

Another theory was that the rays were the atoms of matter, but even after 40 years and what would be the most interesting of all is that they are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

We now know that about 80 percent of the cosmic rays are composed of high-speed protons or nuclei of atoms of hydrogen. Most of the others are alpha particles, the nuclei of helium atoms, plus a few nuclei of atoms of heavier elements, such as iron and carbon.

Cosmic rays have far greater energy than X-rays or any other known form of radiation. Physicists now say that the rays may be supplied by fields of electric and magnetic force perhaps generated in our own great galaxy of stars, the Milky Way.

A highly simplified picture of what happens when a cosmic ray plunges into our atmosphere is that of a high-powered bullet striking a pile of marbles. It means that the rays are everywhere, even in the heart of the ocean, and the part they play in the life of the world is a mystery.

American soil stretches up the peninsula to equator halfway between.

Our planet's magnetic field thus serves as a sort of filter which permits only the strongest cosmic rays to come through where a deflection power is created. When weaker and weaker rays are able to penetrate as the fully ionized rays come toward the north and south. It is like a sheet of lead that is thin in the center but grows thicker and thicker toward the edges, and at which are being fired bullets traveling at many different speeds. Only the fastest bullets can penetrate the plate in the center, but those with less and less speed are able to go through as they strike nearer and nearer the edges.

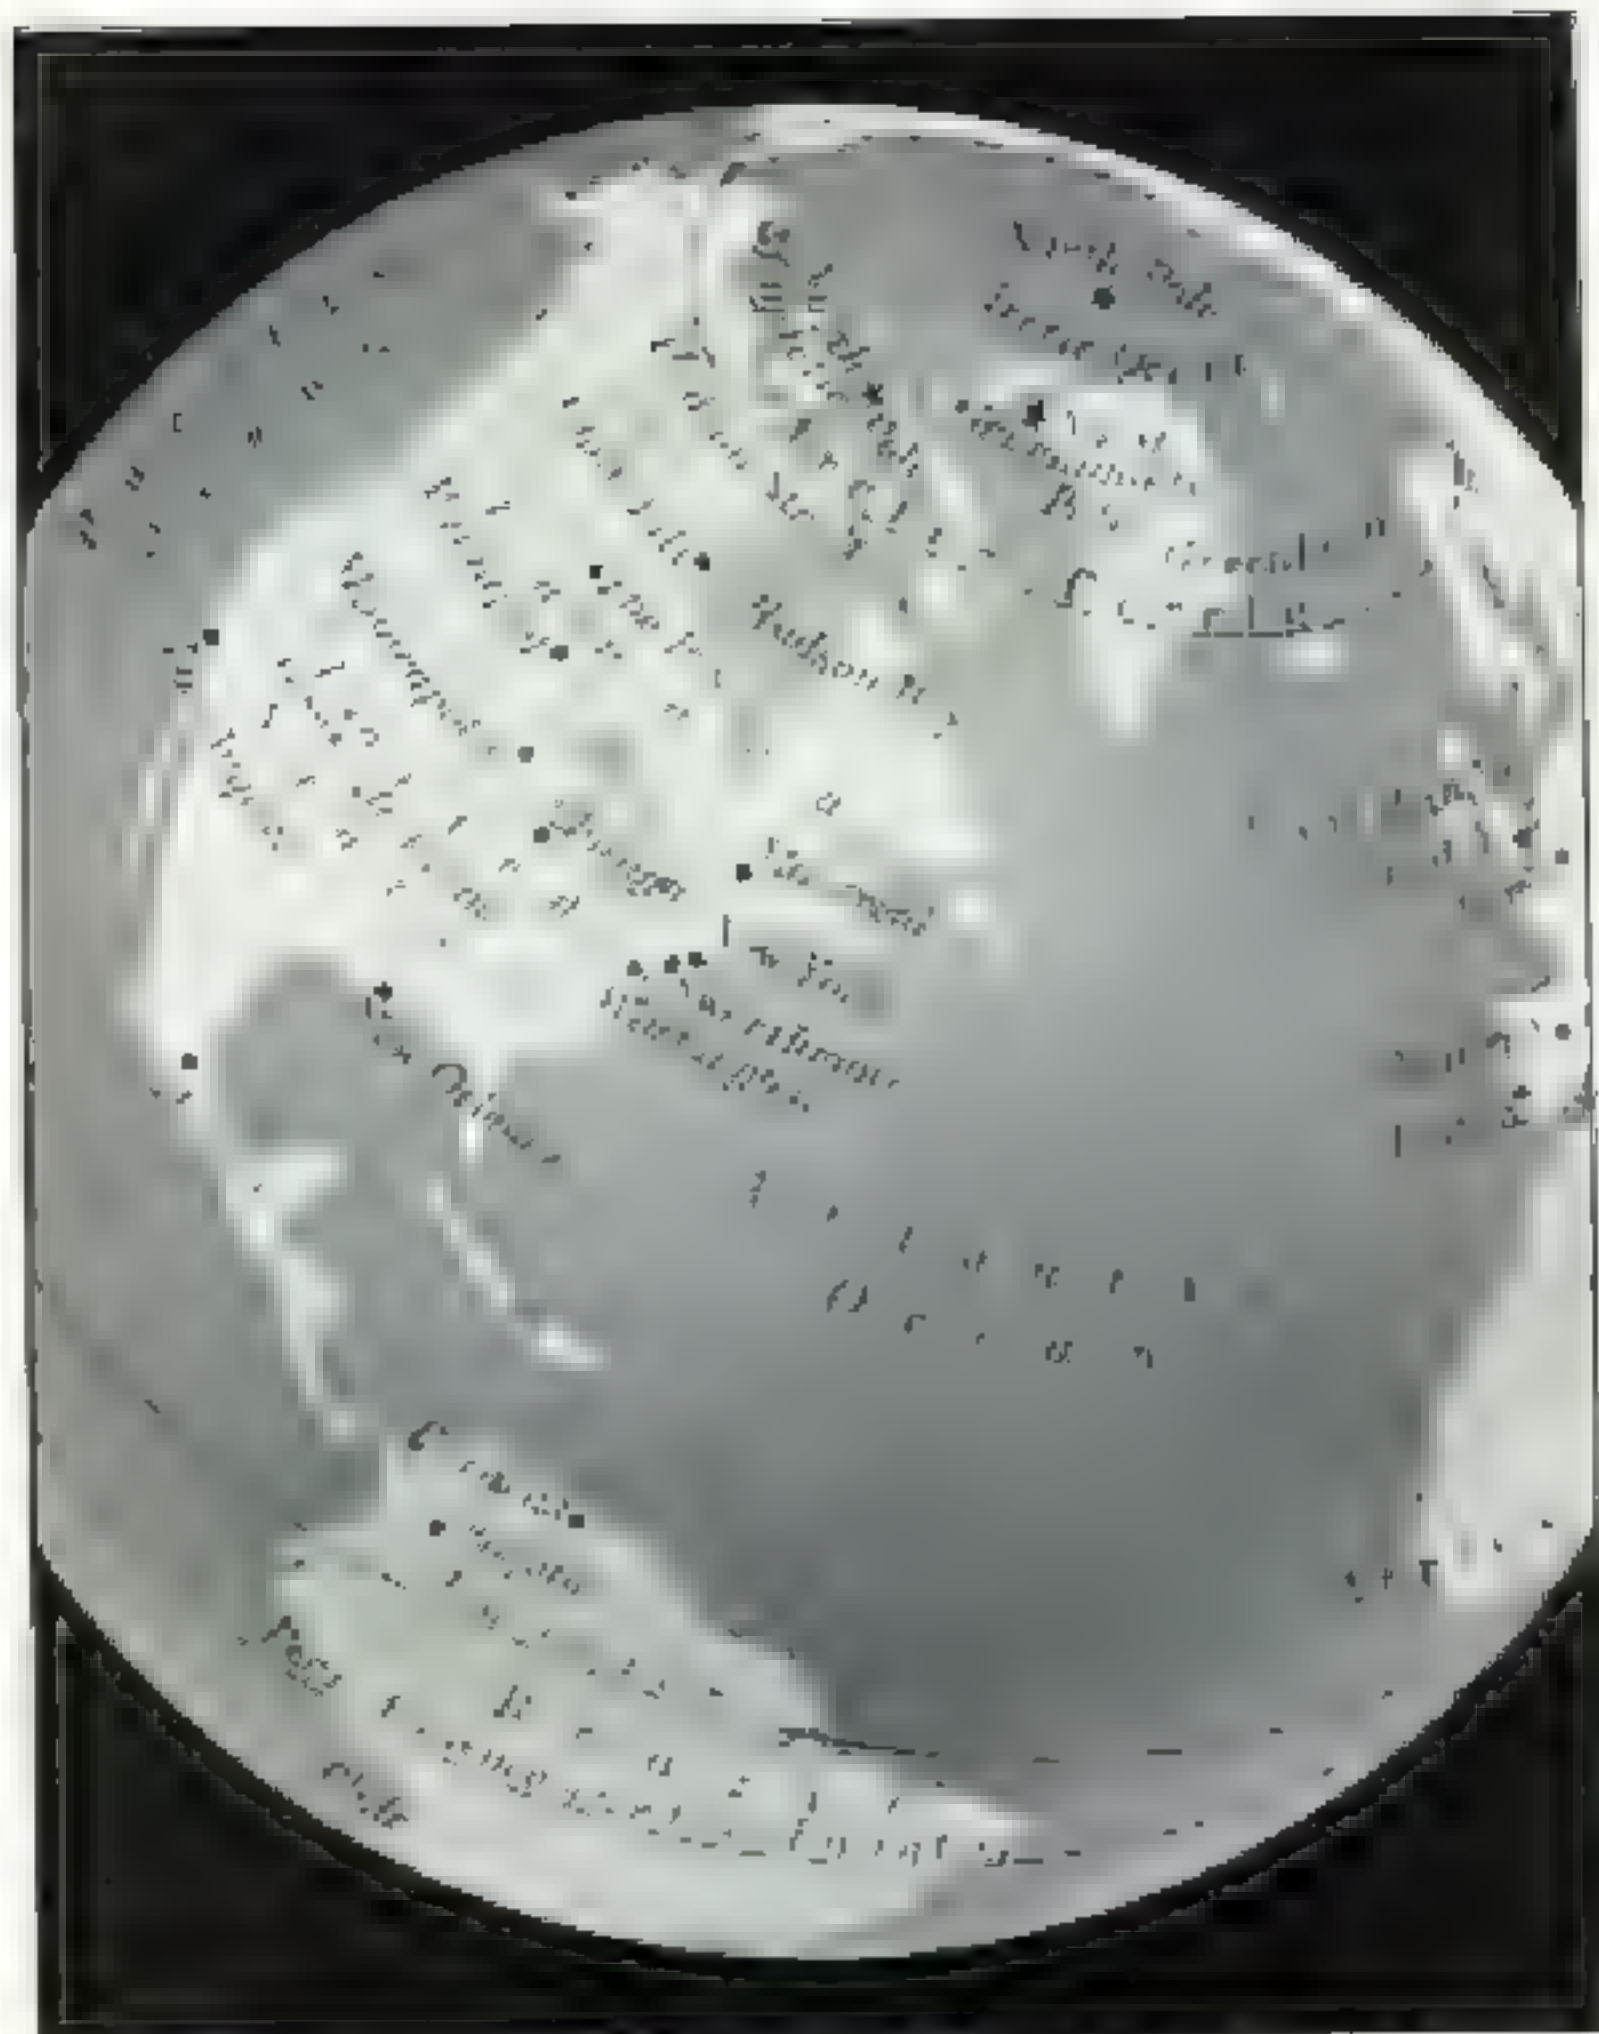

Many television picture tubes make use of this same principle by employing a magnetic field to control the paths of electrons in the electron beam that produces the picture. Turning the focusing knob on a set of this type regulates the magnetic field.

Because of this filtering effect of the earth's magnetic field, more rays penetrate it at the North and South Poles than at the equator. At the Bartol Research Foundation, just farther south at the geomagnetic equator. Now we wanted to see if all more rays were coming through farther north at Churchill.

On the Trail of a Discovery

If we found more rays coming into the atmosphere here, the additional ones would be weak rays that could penetrate the rather ionized field only at higher altitudes. Should we find these weak rays coming in, we would have an important clue to where some of the cosmic rays came from and to conditions out in space controlling their flight toward the earth.

The very first balloon flight might give us the answers we were seeking. I decided in

Northern Skies Gave Clues to Cosmic-ray Origins

Over Hudson Bay the author discovered rays coming southward with increasing intensity as they came farther away from the geomagnetic equator. Low-energy rays penetrate only near equatorial areas. None but high-energy rays penetrate at even north equator.

teeth to the buzzing sounds coming sharp and clear in my earphones.

"The signal strength seems remarkably high," I said to my assistant, Bob, kept at the radio receiver stand. "What was the last indication of the balloon rays' intensity?"

"About 6,000 feet," he said, "and rising 250 feet a minute."

"Let's make another check on the number of signals per minute," I said. "If previous rays were too weak to enter the atmosphere at SW, now more are getting through here, some of them should be penetrating down to where the balloon is now."

After listening for about 10 minutes and marking down each signal as it came, I began to realize with rising excitement that the buzzing sounds were coming about 20 per cent

A Microscope Shows How Cosmic Rays Smash Atoms

THROUGH SCIENTIFIC "MICROSCOPES" it appears that particles produced on a planet are going off on their own mission in the universe. An analysis of a cosmic ray's motion at the light speed of 186,000 miles per second shows the underlying mechanism for the atom's behavior.

faster than they did at Sweet's store. Unless the increase was a fluke, we had found what we already ought to be on the track of what we were seeking.

We decided to back the gear by hunt for the entire duration of the flight. This would tell us what was happening much more quickly than going on over the distance of the case, though the cost of course played a check on our third counts.

During the next five hours, while the hot gas stirred the air near at 175,000 feet and then descended, we thought only of cosmic rays. We completely forgot that we had had nothing to eat for the past 18 hours and had spent only a restless hour and a half in our sleeping bags the previous night. Disregarding the unworldly words of Eskimo Husky dog-chained next us.

Only later, on view of the first flight had been plotted in the form of a graph, which we could compare with a similar one taken at

Sweet's store, were we to know that we actually had found an increase in number of cosmic rays. Then we took time out for a modest meal.

Our findings meant that we had discovered a group of cosmic rays never before detected or studied—rays of cosmic rays, or rather, what would presently be called "muons," from their large features.

We also had strong evidence that the sun had no magnetic field that could be detected by present methods. If such a field existed, it would have deflected away from the earth the weak cosmic rays we had found coming in at the top of our atmosphere.

Some Cosmic Rays Born on Sun

More important still, our discovery was a step toward solving the mystery of the origin of all these cosmic rays. Further study by ourselves and other researchers everywhere showed beyond doubt that these weak rays

must be born at the sun, for this type does not have enough energy to have enabled them to travel from more remote parts of the universe.

To ascertain the exact results of our first balloon flight we needed to start our measurements. We were to have a week's rest, for the very first two months of summer were more than laid gone, and the summer vacation in September was only three weeks away. The interval averaged nine or ten days between the last frost in spring and the first in the fall. In the harsh north country Nature makes liberally for the old-fashioned snow of our northern states. Ten months of winter and two months of late fall.

The evening days were full of time packed with reading, as light after light continued to show the increased counts of cosmic rays at the top of the atmosphere in this northern latitude.

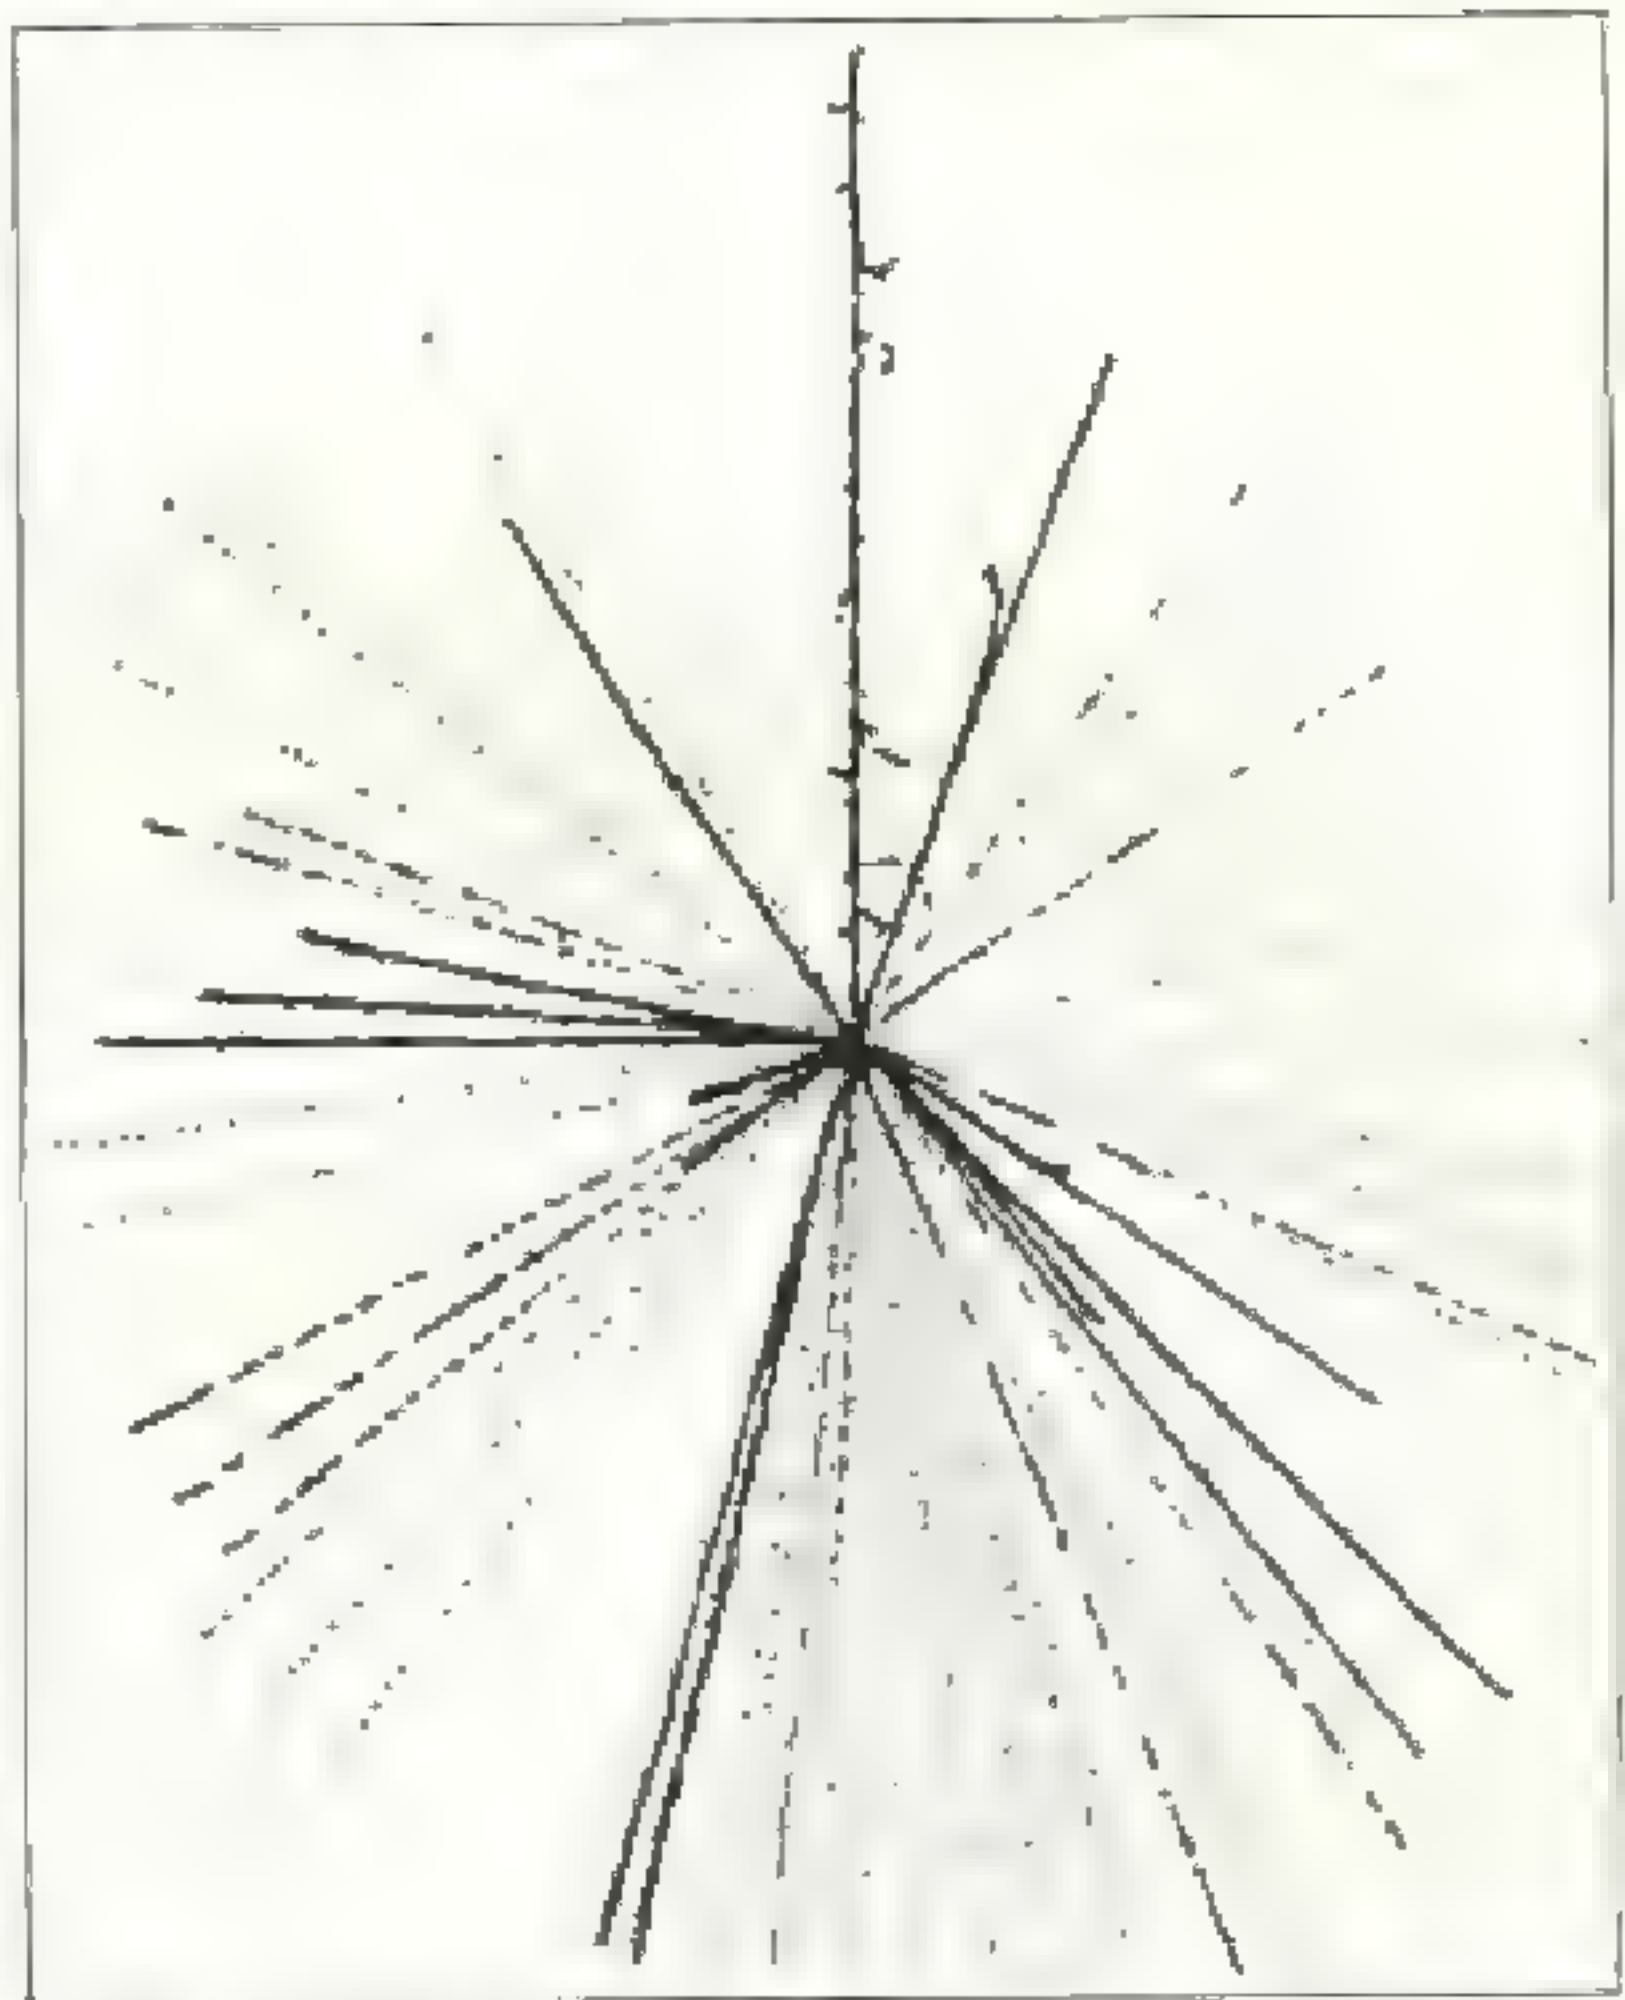

Our early morning was hectic, for the morning sheet was only partially set. We rose in the dead of night to prepare for a

balloon flight at dawn, when the wind usually was at a minimum stage.

First each balloon would have to be inflated for about 10 minutes by a large rubber bulb by the use of a special pump. The purpose being to expand the envelope as fast as possible. Otherwise the balloons would have burst prematurely, for the natural tendency of the rubber is a result of a long and expensive process.

If the wind was light the balloons floated in the air and were

it took two or three hours to inflate the 12 balloons. The amount of gas in each had to be adjusted with great care so that the balloons would rise at the same rate. Two feet, where two balloons would burst. For the others, with their gradually increasing

Fragments Fly When a Ray Strikes an Atom

The primary cosmic rays, which are extremely energetic, strike down on the Earth's surface, creating a shower of secondary particles. These particles, in turn, strike atoms, creating a cascade of fragments. The fragments fly out in all directions, creating a starburst pattern. The fragments are labeled with numbers, indicating the sequence or type of fragments.

be the light of the sun, which is the source of the light. The light is scattered more slowly, so that the light is scattered into what is called the light atmosphere into which the light is scattered.

For the first 10 feet of the balloon work, the balloons were inflated with gas. The remaining gas would not have been enough to keep the balloons aloft, and the balloons would have descended.

Rise of Balloons, Then Breakfast

Not until the gas was successfully inflated could we start our balloon flight. After we had inflated the balloons, the other two would adjust the balloons and start the recording tape working. The tape would then immediately start counting.

months when the ice
is broken and the
whales are seen.

Expedition Members Stack Cylinders of Hydrogen Gas for Inflating Their Balloons

Rained to rest on the ice on Jan. 14, 1914, and then completed the second summer at Churchill. Wind speed and direction instruments shown, which balloons will be used to launch.

Division, G. W. Rowley. Especially helpful were the scientists who headed the British Northern Expedition at the last during our two visits. Dr. Guy Macdonald and Dr. Kenneth Mackay, and the administrative officer, A. V. Hannay. Dr. F. H. Taylor and Dr. Louis V. Brown of the Canadian National Research Council took part in our first expedition.

Unusually we had time to see belugas swimming and shooting white whales in Churchill's harbor. The whales grow to 12 to 14 feet long, appear when the sea goes out. Their oil is exported, their bones are eaten, and the rest of the meat is used for dog food. A great many of the Churchill families are of red blooded stock, a year ago 11.

Churchill has a stone house, post office, north. Hudson Bay Company, several stores, a few small wooden posts, two small hotels, a station and the Royal Canadian Mounted Police. But this is not our expectation of government. We found that their workday includes a lot of time for hunting and the hunting season is open only at certain and other special seasons.

Churchill's average July temperature is only 53° F. and in January the average is 16 below zero. The lowest temperature on record is 57 below, and the highest 92. In mid-December the sun does not rise until nearly 9 a. m. and sets again soon after 3.

Wind Chill Causes Quick Frostbite

Churchill has the curious distinction of being a place where wind chill can cause frostbite more quickly than almost anywhere else on earth. Wind chill is the result of a combination of wind and low temperature, which removes body heat faster than it can be replaced. Because of this, many of the buildings at Fort Churchill are connected by an "ice" passageway to minimize the need for going outdoors in winter.

The wind and the severe cold make this area an ideal place for testing military winter clothing and equipment. Both Canadian and United States forces use it for this purpose.

One Churchill rapper told us with a twinkle in his eye, "low heat or turned to ice men never to his own advantage." A old man with much

— Also, the desired result. So we had to repeat with the feature of computing at the end of each step.

In contrast to another case of burglary reported in the Times, I was fortunate in the fact that the burglar was caught very soon after he broke at the Fort Church College gates, and he was immediately arrested and taken to the police station. I was asked to take about 200 dollars.

[illegible][illegible]

Yes, I explained that we were in the middle of a new trial, one that the district judge was conducting. I thought that the jury would be happy to hear that.

Cosmic Rays No Beans And

William's letter to the *Journal of Law* that November had been somewhat surprising. It had not been a letter of protest or even of criticism. It had been a letter of support. "I am glad to see that you are doing your best to make the law a more useful and less costly affair in the daily work of the community and of the nation," he had written. "I hope you will make the system of law on the market in the country."

The radiator was considerably larger and I was surprised to find it covered by the large tarpaulin which I had noticed I discovered that most of the water in the first run now in the future was a washing water. I was very much surprised when that run came that the water was so much better than the first.

Although it is often pointed out that the 1911-12 season was exceptional with our exceptionally low rainfall, it was not an entirely "drought" year. It included an exceptional season for some crops and for others it was not so good and for some the difference was not great. In the opinion of a good many

The government has been successful in reducing unemployment by 1% from 1992 to 1993, but it is still far from the target of 5% by the end of the century. The government has also been successful in reducing inflation from 10% in 1992 to 5% in 1993, but it is still far from the target of 2% by the end of the century.

found when the inscription was all it should have been. It was not a true inscription, but a mere record of the fact that the inscription had been made. The inscription was not a true inscription, but a mere record of the fact that the inscription had been made. The inscription was not a true inscription, but a mere record of the fact that the inscription had been made.

How Linked to Solar Temperature

This was the first indication of a split between you and me. I was not so forthright as the son and the father, for I must have felt that I was the son here. As you, although I was the father in your eyes, was not so forthright, I must have felt that you were the son and I was the father. The article quoted by you in the *Los Angeles Times* on the subject of the "new" and "old" money is a good illustration of the difference between the two. The son is the "new" money.

Dr. David L. Gross, director of the National Institute for Standards and Technology, said that the inquiry "program is being up and running" on the subject of "several scientific disciplines."

When the proposed hierarchical regression model was fitted to the data, the β coefficients and their standard errors are reported in Table 2. The R^2 for the 1st and 2nd model had an increase of 0.001 and 0.002, respectively. The β coefficients indicate that the main effect of X^2 on the dependent variable is positive.

Our second partner, Crystal O'Neil, is a white, 11-year-old, extremely intelligent, bright, outgoing, popular, happy, confident, and low energy child. We have discovered, before now, and during our our studies about the ways that our children feel. Our first child, age 11, was diagnosed by Dr. W. M. Clark and Edward S. Smith of the Johns Hopkins School of Medicine.

We wanted to make sure that there was no variation in the number of counts we counted due to the fact that the atmosphere at different times of day. If there had been, we would have been seeing variations that a strong magnetic field exists on the sun. We cannot see such a spot a field. At one time, that is the second summer, some of our experiments did showed the same results. A constant rate of counting at the edge of the atmosphere.

For some of our earlier flight we passed over the land. However, the larger numbers of birds now and in the past, the carrying capacity of the land is less in the spring of 1942, as shown.

"Shelton" 11-2-48 17 25 410000

We also see up to 10 million butterflies were reared this summer, but so many in the work of the summer that, according to the survey, this year we saw a significant drop in the number of butterflies reared. The number of butterflies reared this year was 10 million, but the number of butterflies reared this year was 10 million, but the number of butterflies reared this year was 10 million.

Furs Boy Wore Man's Clothes for Indian Children in a Hudson's Bay Company Store

The Hudson's Bay Company store in London, England, which has been open for over 100 years, is the only store of the kind in the world. It is the only store in the world where the Indian children of the Hudson's Bay Company are allowed to wear the same clothes as the men. The children are allowed to wear the same clothes as the men because they are the only children in the world who are allowed to wear the same clothes as the men.

from Montgomery, Minnesota, on a ship which sailed at night and was lost 22 miles from the shore. The ship was the *General*, a schooner, and the ship was lost in the Gulf of Mexico. The ship was lost because of a storm and the ship was lost because of a storm.

Rays May Wander 10,000 Years

During the entire duration of this flight, nearly a half day and night, our astronomers registered no change in the number of cometary rays coming in at right angles. So during the day, when the number of cometary rays was at a great point on the earth, as the sun was at what was called away from the sun as during the day when it is turned toward it. This might explain that if the rays come from the sun, there would be a lot of cometary rays when it is at right.

We think the explanation is that most cometary rays coming from the sun are turned away from the sun and are turned away from the sun.

of various cometary fields which exist all through the solar system and the Milky Way as well.

Instead of traveling straight, the cometary particles are carried up by these magnetic fields so that they travel in all directions and wherever directed in interest for study for even as small as 10 feet from the earth. So the rays would come in just as the cometary rays in the field of the earth is in the sun toward the sun.

The most cometary rays, however, probably come from beyond the sun from sources outside of the solar system and the Milky Way.

These study, however, are very common in the earth. Cometary rays would be a whole new proving ground for scientists at the next revolution of the sun. In pursuing this cometary research, have learned much lessons in cometary research. Cometary rays may be a whole new field of the geography of the universe.

First Photographs of Planets and Moon 125 Taken with Palomar's 200-inch Telescope

By MITCHELL MASON

Supervisor of the Mount Wilson and Palomar Observatories

PRESENTED on page 118 this issue of the NATIONAL GEOGRAPHIC MAGAZINE are some of the first photographs of the planets and their moons with the world's largest telescope, the 200-inch Hale reflector on Palomar Mountain, California.

These photographs, and many others, the 200-inch instrument is capable of making. With every astronomical instrument, it will be possible to make some even clearer and sharper pictures. However, it may be some time before better pictures are made, because conditions for each photograph are extremely rare.

For this reason, it is a source of great interest to astronomers the big apparatus that requires these comparatively rarely satisfactory conditions. The pictures are somewhat new. They are some of the planets and their moons as seen with the 200-inch telescope during the past two years.

Details Shown on Larger Scale

Although the new photographs may not reveal much new detail, they do show known details on a larger scale than ever before.

The planets Venus, Mars, Jupiter, and Saturn are shown in the series of photographs. For the first time are shown features that Uranus, Neptune, and Pluto, which are farther away, but even in large telescopes, they show little detail. Pluto, the most distant planet, is only 14 miles from the sun, is only a pinpoint of light even on the most powerful photographs. Uranus and Neptune show no markings.

Mercury, the planet nearest the sun, only shows features that it would be interesting to photograph if it could be reached with large telescopes. However, because Mercury is so close to the sun, it is only visible for a few days at a time, it will be seen only rarely, and always low down in the horizon.

Venus, Mars, Jupiter, and Saturn are of great interest for several reasons. Venus, because it is most nearly like the earth in size and is the nearest planet in size to us, closely resembles in many respects. Mars, because of the interesting surface features which can be seen and photographed. Jupiter, because it is the largest planet and shows a large number of features in its atmosphere, and Saturn, because it is the only known planet in order of comparison of size.

To the casual eye, Venus is the most beautiful of all the planets (page 129). Periodically it appears as both the morning and evening star, or as the "Earth Star," as it is even called with the casual eye. Several reports of "dying stars" have been traced to such appearances of Venus.

The kind of ground or vegetable life that we know of, which could not exist on Venus. Observations with a powerful telescope often show no clouds, and little or no surface detail. It has been seen through a telescope. Venus, however, appears to be covered with clouds, so that only indistinct markings can be observed on its surface.

Because the light is so overcast in all the planets, Mars, in 1877, the Italian astronomer Giovanni Vinti, suggested that the light-colored markings on Mars which he called "canals" were "artificial." Some people have assumed that in reality there, in recent years, intelligent Mars people could not support large forms of life.

Not All Observers See Mars' "Canals"

Some other observers have observed lines and canals, but others with their telescopes and instruments of different design, and some instruments expertly constructed, have failed to observe them. If the markings are narrow, dark, straight markings, or if they are bright, however, they would form a permanent record, and there would no longer be doubt of their existence. A few observers who observe Mars as canals have been named, and photographs made of some of its features. Two of them on the Palomar telescope (page 125) are in the network of fine lines seen by the visual observers.

Probably a well-known feature that the eye can see more through the prism type of telescope than can be photographed, or even seen with eyes. Located in the improved telescopes, cameras with almost perfect color balance, and films, will make it possible to photograph the "canal" system of Mars if it really exists.

Other features of interest shown on this chart are the solar spots, which vary in size with the seasons, and permanent markings which show a seasonal variation in color.

Jupiter, many of the planets, and of the most interesting to photograph, because of the

great amount of observing detail that it contains (page 125). Its markings consist of belts moving parallel to its equator with a latitudinal interval great between the belts. None of the markings are permanent. Some last for a few days or weeks, others like the Great Red Spot, last for an equator, but change its form and position.

It is curious that all the markings on Jupiter are stationary and permanent and that no new surface is ever visible. The markings on the belt are thin and light colored and the belts show a considerable amount of redness and are very prominent in an atmosphere. It would be difficult to believe that any form of life could develop there.

Saturn, next largest of the planets, is a beautiful sight when seen through a moderate sized telescope or an ordinary camera (page 128). Unlike the planet Jupiter, Saturn was not noticed as a bright appearance in 1610. In his small telescope it appeared to have a ring around each pole. Some 45 years later the Dutch astronomer Christiaan Huygens with a better telescope discovered that the appendages were parts of a ring encircling the planet.

As telescopes improved it was found that actually there were three rings, each clearly separated from the others. In the Palomar photograph the rings are seen in the edge on so show the separation clearly, although the distance between outer and middle rings is noticeable at the two ends.

The trend in the ring system next to the side of the planet at the equator like is the shadow of a belt on the rings. Where the rings pass in front of the planet they cast a narrow shadow on the disk.

Moon's Largest Crater

The photograph of a portion of the moon's surface (page 131) shows the large water filled plain or crater, Clavius, and Loricus on the satellite. It is the first good lunar photograph made with the present telescope.

On the wall which separates Clavius appears the recently named crater, Loricus, which honors the late Russell W. Porter, an amateur astronomer who was beloved alike by amateur astronomers and his colleagues of the Mount Wilson and Palomar Observatories.

His beautiful pencil drawings of the Palomar telescopes were extraordinarily valuable in visualizing these instruments when they were still in the planning stage. Porter was keenly interested in the moon's surface, and while he sat at the eyepiece of the Loricus telescope on Mount Wilson, he made some superb lunar drawings.

At the time Clavius and Loricus were photographed, only a 4-by-5-inch plateholder was

available. The scale of the photographs as reproduced, is therefore about twice the size of the original negative.

When the camera is large or small, the problem of obtaining good photographs and lunar photographs is one of the most difficult in astronomy.

One of the very important factors involved in seeing a lunar detail is the manner in which the light from the surface of the moon is reflected. The image of a heavenly body.

Seeing does not refer to the eyes. In fact, it is a hard work with the eyes, when the stars twinkle that prevent seeing a true picture. Twinkling causes bad definition in the telescope and produces pictures which are fuzzy and distorted.

Good seeing occurs most frequently in late spring in the summer, and early fall. Good but seeing conditions such as those needed for planetary and lunar photography, may occur only a few nights each year.

Earth's Atmosphere a Handicap

Good seeing is hampered by the mixing of hot and cold air in the earth's atmosphere. If telescopes could be situated above the earth's atmosphere, seeing would be perfect at all times. An ideal site would be the moon, which has no atmosphere, or the kind of space platform which some people believe will eventually be built as an artificial satellite of the earth.

Although the large scale of the 200-inch telescope is advantageous for securing a detail, excellent photographs of the planets and of the moon can be obtained with smaller telescopes.

Probably the best existing collection of photographs and data on the planets, especially Mars, has been built up with the 200-inch telescope at Lowell Observatory, Flagstaff, Arizona. There Dr. Percival Lowell carried on research, Dr. V. M. Sargent, the present director, and his technical staff, Sargent, have gained wide recognition as authors of planetary photographs. Dr. W. H. Wright and other astronomers at L. O. Observatory, Mount Hamilton, California, have made excellent photographs of the moon and planets with their 36-inch refractor and 60-inch reflecting telescope.

The problem of reproducing our photographs without losing the most of some features that appear on the original negatives is as difficult and important as the observation of the telescope. I should therefore like to say that, in gratitude for the National Geographic Magazine and William Miller, our staff photographer, for their understanding of this problem and for the resultant excellent results on the reproductions.

Palmer's 200-inch Camera Shows Mars' Atmosphere (Above) and Its Surface (Below)

Two photographs taken by the 200-inch telescope at Mount Wilson Observatory show the atmosphere of Mars. The upper photograph shows the atmosphere of Mars as seen through the 200-inch camera. The lower photograph shows the surface of Mars as seen through the 200-inch camera. The surface of Mars is covered with a thick layer of dust and is dotted with numerous craters of various sizes. The atmosphere of Mars is very thin and is composed of carbon dioxide, nitrogen, and oxygen. The atmosphere of Mars is also very dry and is composed of water vapor, carbon monoxide, and hydrogen.

The 200-inch camera at Mount Wilson Observatory is the largest camera in the world. It is capable of taking photographs of objects as small as a few miles across. The camera is mounted on a special platform that allows it to be moved in any direction. The camera is also equipped with a special filter that allows it to take photographs of objects in different colors. The camera is used to take photographs of the planets, stars, and galaxies. The camera is also used to take photographs of the surface of Mars.

Saturn's Cassiopeia Halo: Tiny Particles, Each Moving in Its Own Particular Orbit, Form the Ring System

Large clouds of gas and dust surround the planet Saturn, but the ring system is made up of much smaller particles. These particles are thought to be the remains of a moon that was destroyed, or perhaps they are debris from a comet that struck the planet. The particles are held in orbit by the planet's gravity, and they move in their own particular orbits, which is why the ring system appears as a continuous disk.

Face to Face with the Moon! The Big Eye Shows Our Satellite as if 200 Miles Away

Most of the time, the Moon is a pale, featureless disk in the sky. But now, for the first time, we can see it as it really is. The Big Eye, a new satellite, has been launched to study the Moon's surface. It will orbit the Moon at a distance of about 200 miles, and will take pictures of the Moon's surface from a distance of about 100 miles. The Big Eye will also study the Moon's atmosphere and the Moon's magnetic field. The Big Eye will be the first satellite to study the Moon's surface from a distance of about 100 miles. The Big Eye will be the first satellite to study the Moon's surface from a distance of about 100 miles.

From Spear to Hoe on Groote Eylandt 131

At a Lonely Outpost of Stone Age Ancestral Land Once-nomadic
Australian Aborigines Settle Down to Farm Life

By HOWELL WALKER

With Photographs from Photographs by the Author

THIRTY FIVE men of Ancestral Land
together their spears and walked away
from the field that fed them. A few
men were seen on the horizon again in time
to go. The sun follows left the evening soft-
ens and spell of wet earth to men with
battered spears.

Around this garden a native settlement
grows up under the name of Groote Eylandt. It is
a small island in the Gulf of Carpentaria, 100 miles
at the mouth of the Gulf of Carpentaria.

Like the other islands in Australia, it was
settled by Carpentaria men who had learned
to live on the sea and sea creatures. With spears
and long sticks they killed fish and
shellfish for their food and for their
living. They lived on the sea and on the sea creatures.

When the first white men came to the
settlement on Groote Eylandt, they found them
living on the sea and sea creatures. They found
them living on the sea and sea creatures. They found
them living on the sea and sea creatures. They found
them living on the sea and sea creatures.

Out of the Stone Age

Clashing spears and the planting of
crops of barley and wheat have learned
to live beyond the present. They have learned
to live and learn the future and the future.

They learned from Ancestral Land, the
stone age, the future and the future. They learned
from the stone age, the future and the future. They learned
from the stone age, the future and the future.

They learned from the stone age, the future
and the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future.

They learned from the stone age, the future
and the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future.

With spear and hoe the garden water, the
crops and the water. They learned from the stone
age, the future and the future. They learned from
the stone age, the future and the future. They learned
from the stone age, the future and the future.

The people of Ancestral Land, the future and
the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future. They learned
from the stone age, the future and the future.

Three millions of years in the wet
season for the men of the stone age. They
learned from the stone age, the future and the future.
They learned from the stone age, the future and the future.

Some learned from the stone age, the future
and the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future.

They learned from the stone age, the future
and the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future. They learned
from the stone age, the future and the future.

On the way back to Groote Eylandt we
overlooked a flock of geese. Two men and
women brought up the geese and used a
kind of net to catch them. They found them
on the sea and sea creatures. They found them
on the sea and sea creatures.

The people of the stone age, the future and
the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future. They learned
from the stone age, the future and the future.

They learned from the stone age, the future
and the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future. They learned
from the stone age, the future and the future.

When you come to the future and the future,
they learned from the stone age, the future and the future.
They learned from the stone age, the future and the future.

They learned from the stone age, the future
and the future. They learned from the stone age,
the future and the future. They learned from the
stone age, the future and the future.

Roll Call Brings Mother and Children to Fred Gray's Office Window on Groote Palandt

A woman and a child, looking out of a window, are seen in a photograph. The woman is on the left, smiling, and the child is on the right, also smiling. They are both looking out of a window with vertical bars or panes. The child is wearing a light-colored dress with a dark patterned skirt. The woman is wearing a light-colored top. The background outside the window is dark and indistinct.

A Jumble of Outsize Boats Intrigues Sister, Ba-Bee Brother

No longer content with the small boats of their native land, the two children, who were now 10 and 11 years old, began to build larger boats of their own design. They used the same materials as before, but the boats were much larger and more elaborate.

They sailed along the shores of Arnhem Land, the children's home, and the white men made many trips among the natives.

At last the children's boats were finished. They were gathering about them a great many of the natives, and the children were sailing away. They brought with them a great many of the natives, and the children were sailing away.

Desiring of a New Home

He began to desire a new home, and the one he had left in England, but he was not able to make it. He was now in England, and he was not able to make it.

But in the year 1851, Gray, a young man, and a little boy, who were now 10 and 11 years old, began to build larger boats of their own design. They used the same materials as before, but the boats were much larger and more elaborate.

Island men, and on previous visits, they

had been to work on the spot by the bay and around. Other natives arrived to see the white men of Arnhem Land and of the other natives. Almost overnight a small blue yellow camp appeared beside the bay.

Although Gray was a good man, he had been brought to the spot. He had been to the spot, and he had been to the spot. He had been to the spot, and he had been to the spot.

Yes, he had to work on the spot. He had to work on the spot, and he had to work on the spot. He had to work on the spot, and he had to work on the spot.

No Gray was a good man, and he had been to the spot. He had been to the spot, and he had been to the spot. He had been to the spot, and he had been to the spot.

A Fleat Sack Clothes a Farmer Planting Cassava in Irrigated Fields

Here the farmer plants the cassava in the field. The plants are spaced out in rows, and the farmer is using a tool to plant them. The field is irrigated, and the water is visible in the foreground. The farmer is wearing a light-colored loincloth and is holding a long, thin object, possibly a tool or a seedling.

women, who had to rise up outside for food, sought to be to supplement their income. Through an open door they could see bananas, coconuts, and sugarcane, and with heavy-laden baskets of rice and beans, wheat and potatoes, were always putting in a cash-bag. Yet not a woman looked untroubled.

Mental Jobs for Women

A woman's endless flow of domestic and social work took a heavy toll. To them were devoted the mental but never useless household responsibilities. They gathered firewood long with men in jungle scrub and on the edge of the rice marshy but dense forested fields and along the rocky shores and forested river children and the wife were a constant presence.

The men were the "big boys" they made law for carrying scars. Wherever of whom

ever they argued, it behooved the whole family to do. Men argued, grumbled, fought and then a broken heavy mass out of the rice, spotted turtles and dugongs, square fish, some of which, particularly objects in a certain position of the that the women were to do.

It was men brought in an axe, the axe at the oven, and then most of the day. Women could be seen with the axe.

A woman had no choice in marriage matters. While still an infant the first child of a family was promised to her mother's brother, whose wife she became. He then died. We heard any man who he single, married her when unmarried. And as an infant he could automatically claim any sisters she might have.

In this old order of life and the first day had some say at the time of the

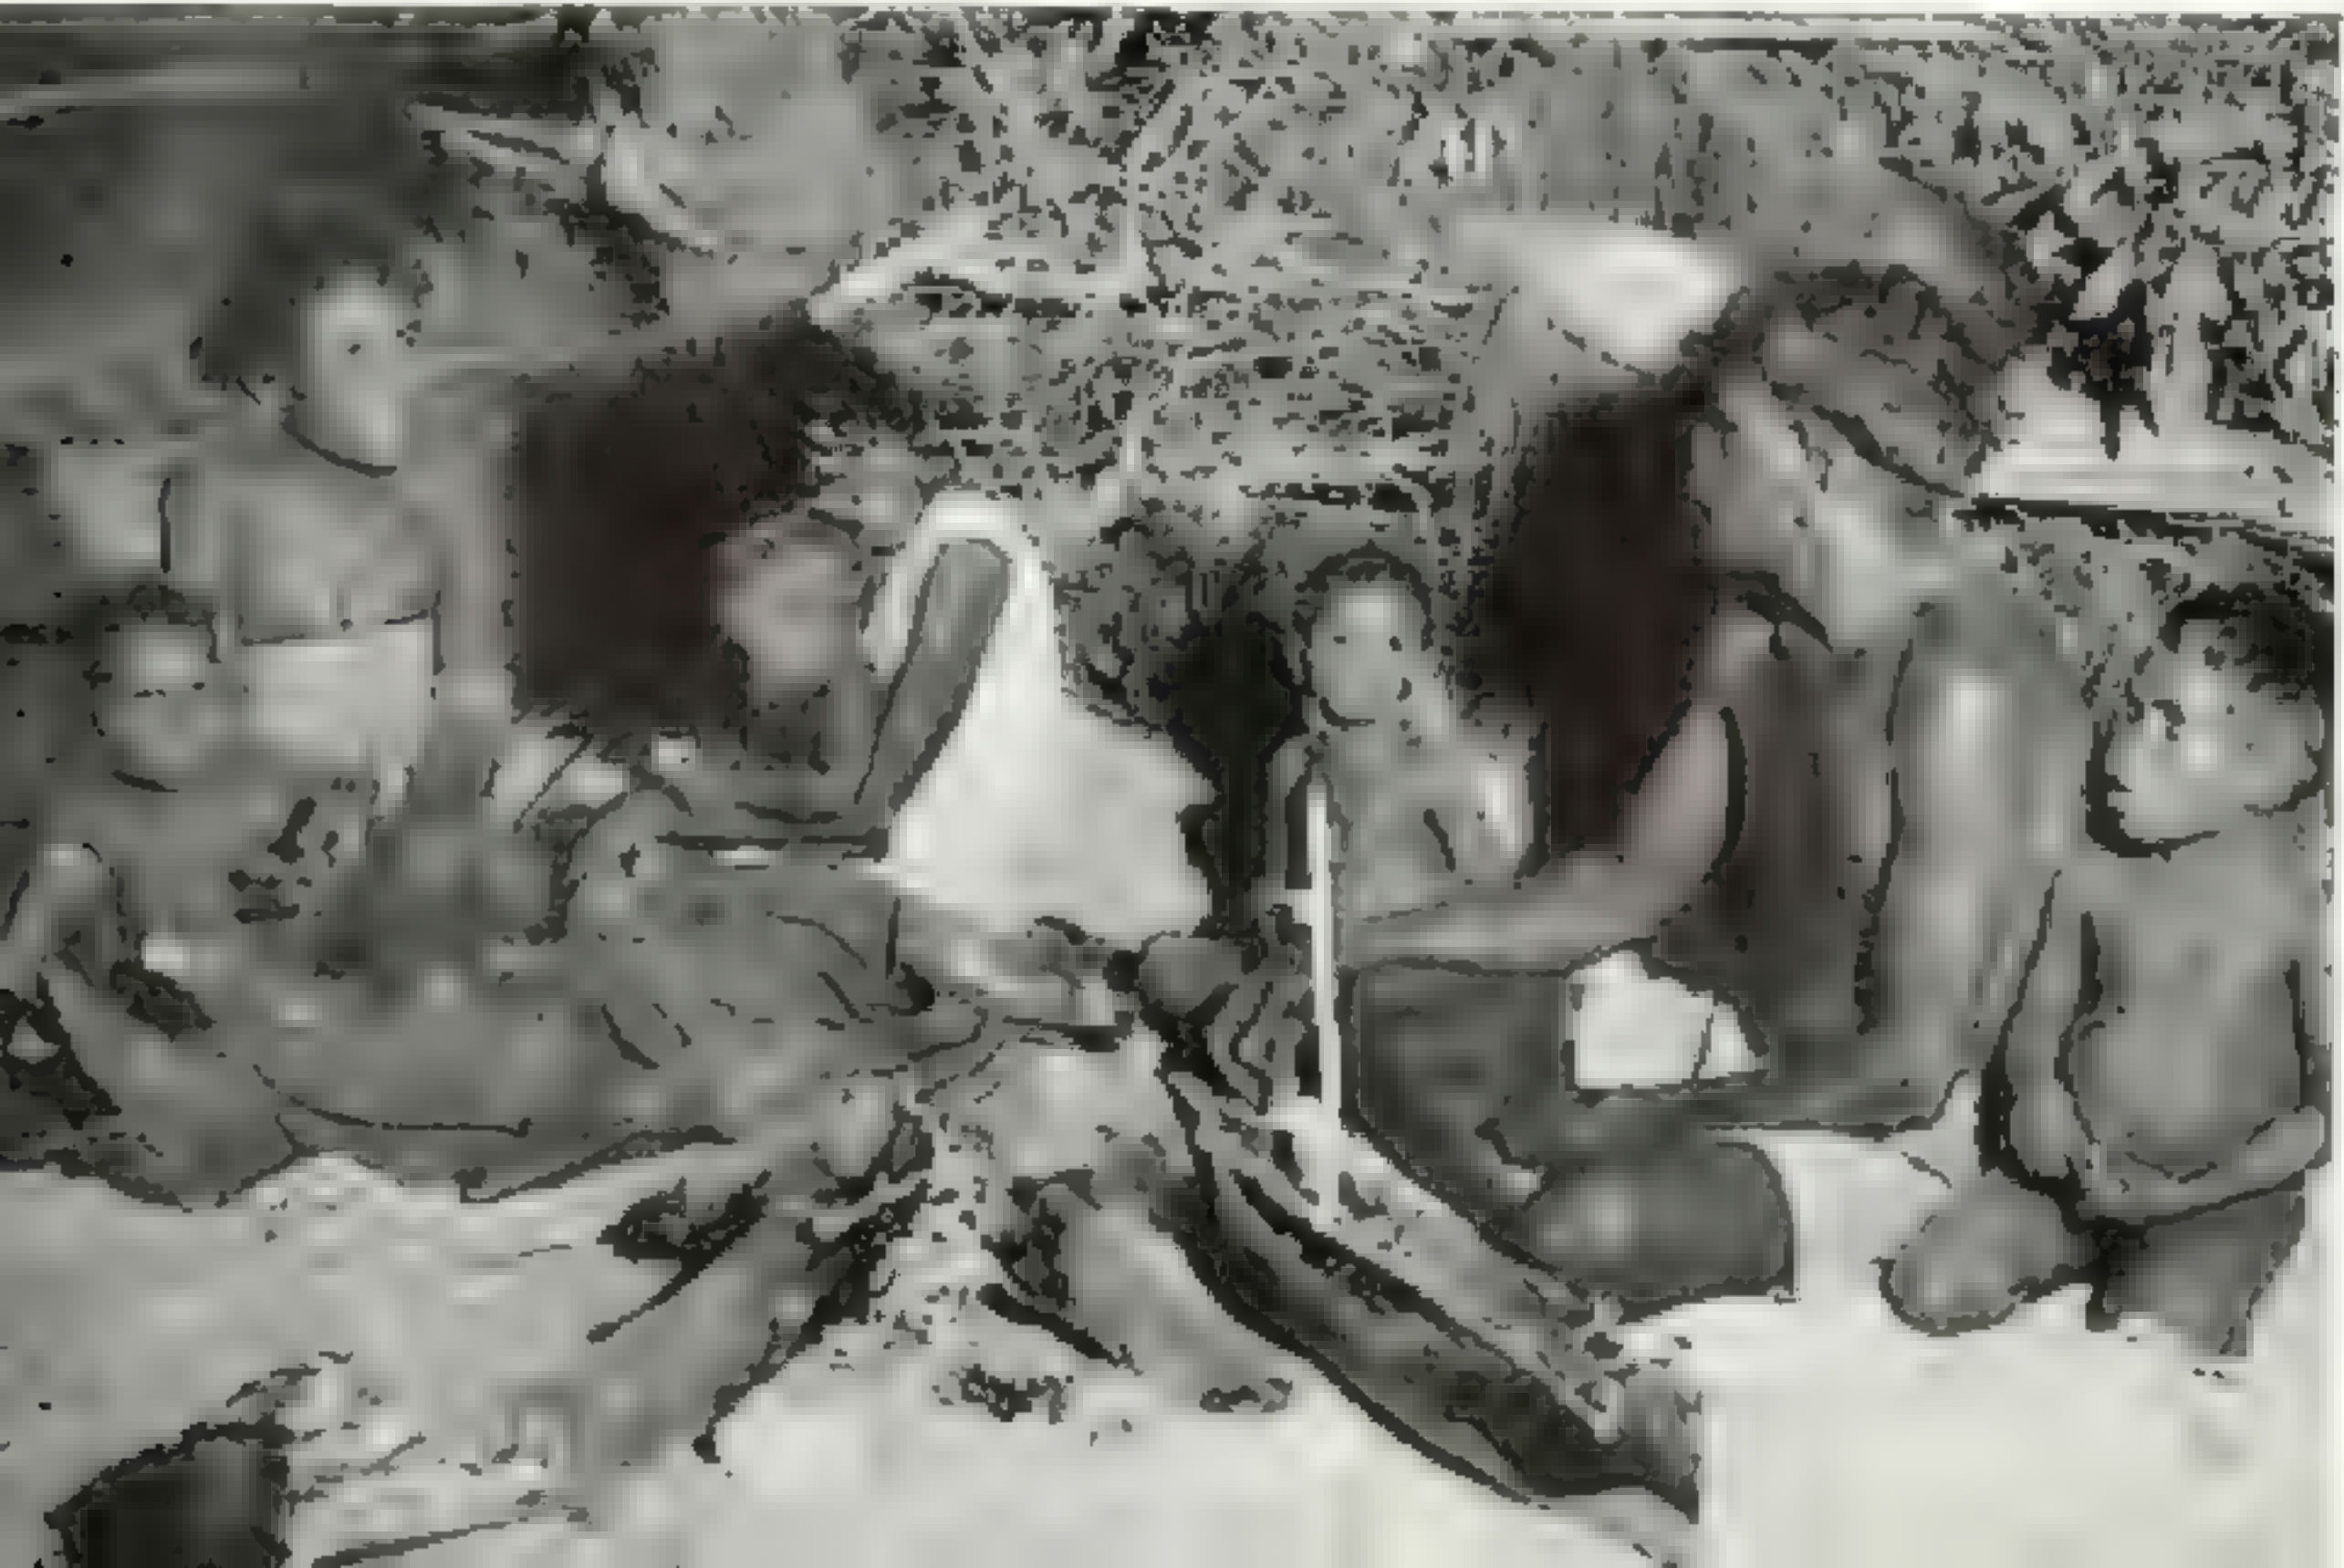

116

↑ Natividad, the Grays' Houseboy,
Serves Dinner at the Homestead

Some watch the houseboy, Natividad, bringing a tray of food to the table. The scene is a typical one for the Grays' household. Natividad is a young man from Mexico who has been working for the Grays for many years.

▼ Quant Pot, the Father, Gathers
His Family Around the Campfire

Our first night in the homestead, Quant Pot, the father, gathered his family around the campfire. The children were all asleep, and the father was the only one awake. He was sitting on the ground, and the children were lying down. The father was looking at the children, and the children were looking at the father.

He took new peas, drew up his own revolvers, and aimed at a starling in the air.

Long pipes, six inches long, enough to ensure much comfort. He was over eight or even within a decade of our century. A woman, however, continued to take a back seat.

Upon the thing, fairly really, and as it had already succeeded, in the past, I thought I had to bear up.

Although it might appear that men generally are more powerful than women, they got only what they earned at Unalakleet. A man worked hard, and he had to be. He had his own career back to the garden or back to the bush. The settlement, however, was a woman.

Some of the children are well and rested after dinner. The children, back home, have been in the fields. Some of the boys have been over the fence, and some of the boys have been in the garden, and some of the boys have been in the garden.

School Out, Children Play

An evening of light as white cockatoos, and a few of the birds in the past of the settlement. Margie, however, was not in the garden. Some of the boys, however, were in the garden, and some of the boys were in the garden. Some of the boys were in the garden, and some of the boys were in the garden.

Forward, however, I walked in the garden with Fred. We followed a fellow, and he was in the garden.

But Green Island, native, don't use the same kind of gun as Fred.

They are right with Fred. There are rumors that a man and a woman, and some of the boys, are in the garden, and some of the boys are in the garden.

What would they be fighting about? I asked.

The usual story, however, that one of the women, and the settlement really had to be. Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

But one of the possible attacks on Green Island, however, had to be. Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

The other type consisted of a dozen boys, and a few of the boys were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

When finished with their weapons, the natives had to turn them over to the settlement. Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

Green Island, however, had to be. Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

False Alarm: Weapons Returned

One of the boys, however, had to be. Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

And so, however, Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

Shortly afterward, the boys, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

I, however, by the garden, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

At night, however, Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

At night, however, Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

At night, however, Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

Never, however, they showed up, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

What did I say to you, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

You said, however, Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

What, however, Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

A Session with Magazines

Later, however, Fred, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

The only lived day in the settlement ended only when the boys, however, and they were in the garden, and some of the boys were in the garden. Fred, however, and they were in the garden, and some of the boys were in the garden.

Girls in Dresses and Rows in Lounges Attend a School Taught by Mrs. Cline, Only White Woman in the Community

to the school, and the girls are very much interested in the work. The school is a very good one, and the girls are very much interested in the work. The school is a very good one, and the girls are very much interested in the work.

Baldy Quenches His Thirst from a Paperbark Lining Cup

At the top of the page is a small, faint illustration of a bird, possibly a egret, standing in a marshy area. The text below the illustration reads: "The egret is a common sight in the marshes of the South. It is a large, white bird with a long neck and legs. It is often seen standing in the water, drinking from a paperbark lining cup." The text is written in a small, serif font and is located at the bottom of the page.

"Come in...
where it's
cozy—"

There just isn't a more comfortable or convenient way to travel in winter—or all year.

A soft blanket has no icy wind and a window for leisurely pleasant moments, more sun attraction. And of course, a coach passenger has respect fully in view of sea and stable conditions.

As for food, you can't find more tasty than the meals served in Union Pacific dining cars.

1. The first part of the paper is devoted to the study of the properties of the function $f(x)$ defined by the equation $f(x) = \sum_{n=0}^{\infty} a_n x^n$, where $a_n = \frac{1}{n!}$. It is shown that $f(x)$ is an entire function and that $f(x) = e^x$.

40 RDC'S FOR THE PROGRESSIVE NEW HAVEN

It is widely known how to carry passengers profitably in the New Haven New England Division is derived from RDC's service in contrast with most railroads where the dirt is king.

This is due mainly to the fact that the New Haven has become the largest purchaser of Budd RDC's—stainless steel self-propelled diesel cars.

In the nearly three years RDC's have been operating in this country and abroad they have completed an impressive record in performance; they have improved every service they were assigned to. In operation they have proven both reliable and economical—two RDC's saved the railroad \$600,000 in a year. In the commuter service, a streamlined service they render, 40 RDC's have increased passenger patronage and RDC's operating on a new service between Worcester and New London, picked up 1944 passengers in the first week.

Both New England and the New Haven will continue to expand RDC's operation.

The Budd Company, Philadelphia, Detroit, Gary.

When does a "simple cold" become serious?

Whenever fever—even a degree or so above normal—accompanies a so-called "simple cold," it is serious enough to be called to the attention of your doctor.

Most of us regard a cold as a fairly minor ailment, and we say, "It will be gone in a day," and, relying on our favorite home remedy, attempt to cure it in a matter of hours.

Doctors have a more serious view of colds. They believe that an early diagnosis, prompt and proper treatment, is essential. Most physicians advise that a child with a cold should be kept

Remain at home and rest as much as possible, preferably in bed; eat light, wholesome food; drink plenty of liquids; and be sure to check your temperature.

in bed for a few days, and that the child should be kept out of school or other places where the spread of the germ is likely to be a factor.

In fact, it has been estimated that colds are the leading cause for the hospitalization of children. So, a child who is kept in bed, even if only for a few days, is not at all to be

regretted. On the other hand, getting on deep-seated infections and the general state of the child's health is a factor in the treatment of the cold.

For many years, doctors have been warning us against the use of medicine. Just a few years ago one out of every three children was dying from a common childhood disease, measles. Today, modern drugs are making the child's body stronger and the virus less effective. Instead of a fatal disease, it is now a mild one, and the child's recovery will be rapid and complete. So, the doctor's treatment is not as vital as ever.

Good health habits, properly followed, are the best defense against the spread of colds. The child should be kept out of school and other places where the germ is likely to be a factor.

Avoid loss of sleep, excessive fatigue, and over-exposure to extreme cold and dampness.

Eat a well-balanced daily diet.

Stay away from people who cough or sneeze carelessly.

See your doctor for a thorough physical examination if you have frequent colds.

SO LOW COST

A complete Apēco Auto-Stat one unit photo-copier, for retail use, is priced well within the value of even the smallest frame. It is remarkably low in cost of operation, too!

Dry Photocopies Instantly

NOW ONE MACHINE DOES IT ALL!

Revolutionary New

APĒCO *Auto-Stat*

With built-in automatic continuous printer

All-in-one compact unit makes photo-exact copies direct from original letters, forms, bids, contracts, invoices, catalog sheets, reports, blueprints.

Now a single all-in-one compact photo-copier — makes a dry photo-copy from any original in less than 15 seconds without any other additional equipment. This one unit prints, processes and dries all automatically — copies are ready for instant use. The Apēco Auto-Stat takes up to 50% in copying jobs. Eliminates costly copying, hand copying, checking or sending outside for expensive copying service. In cost, only 2 cents a copy. Legally accepted prints from any original up to 11 x 17 inches — whether printed on one or two sides.

HAVE YOU READ THIS NEW BOOK?

Here is a really informative, worthwhile instruction booklet on the new copiers and development. New book on pictures and prints. Complete Apēco Stat booklet shows how you can use this revolutionary new photo-copier machine.

Don't get a machine made in the U.S.A. by **AMERICAN PHOTOCOPY EQUIPMENT COMPANY**

American Photocopy Equipment Co.

2643 N. Clark St. Dept. NG-13, Chicago 14-1.

Please send me a free information FREE copy of your new book on Auto-Stat machine. I will send you this new 100-copy machine.

★ Landlocked Salmon, Painted by Walter A. Weber for *The Book of Fishes*

Stalking Birds with Color Camera

MANY SECRETS of our avian friends are revealed in this unique book. Acclaimed by reviewers and thousands of bird lovers, it represents a revolution in wildlife illustration.

In 189 pages of NATURAL COLOR there are 331 photographs, many in full-page size. Most of them were taken within arm's reach of the wild subjects. They include 1/5000-second flash pictures catching minute details of bird flight.

This beautiful book is a result of Dr. Arthur A. Allen's many years of notable research and expeditions, sponsored in great part by the National Geographic Society. Edited by Dr. Gilbert Grosvenor, it is not just another "bird guide," but a treasure of "inside information" on our feathered neighbors.

As the first cost was borne by the NATIONAL GEOGRAPHIC MAGAZINE, this 328-page book is only \$7.50 in U. S. & Poss.; elsewhere, \$7.75 in U. S. funds. Postpaid. Rich, green covers, 7" x 10½".

The Book of Fishes

IF YOU HAVE NEVER wet a fly or cast a plug, the new 1962 edition of *The Book of Fishes* will open a fascinating new world to you. If you are an ardently addicted rod-and-reel veteran, it will add extra pleasure to your sport.

Its 340 pages are an intensely interesting search into habits and life cycles beneath the waves, where countless hosts of creatures—some incredibly weird—live in a savage realm of eat and be eaten. It is packed with high adventure as well as practical hints on game fishing.

A grand total of 159 FULL-COLOR pages bring you 116 COLOR PAINTINGS and 24 COLOR PHOTOGRAPHS—with biographies—identifying 236 species of game and food fishes and other aquatic life in United States salt and fresh waters.

A delight to read and to own, *The Book of Fishes*, edited by Dr. John Oliver La Gorce, is bound in maroon and gray, 7" x 10½". Because first cost was borne by The Magazine, it is modestly priced at \$6.50 in U. S. & Poss.; elsewhere, \$6.75, U. S. funds. Postpaid.

National Geographic Society, Department F-N, Washington 6, D. C.

WELCOME HOME, SERGEANT!

A Telephone Family in Chicago. Sergeant Donald McIntyre got a real family welcome from his sister, Mary, a Service Representative; his mother, who was an Operator for seven years; and his brother, Angus, a Plant Assigner. Sergeant McIntyre's father was also a telephone man.

Sergeant Donald McIntyre, former telephone installer, returned home from Korea a few months ago. He served with the 1st Marine Division and was twice awarded the Purple Heart.

He was welcomed back to his telephone job, of course. But in a certain sense he had never been away. For his new pay check reflected the increases he would have received on his old job if he had not joined the Marines.

There are some 16,000 other Bell Telephone men and women now in the service who will receive a similar warm welcome on their return home.

BELL TELEPHONE SYSTEM...A GOOD PLACE TO WORK™

Casting Magic

Precise duplicates of hard metal parts used in everything from sewing machines to jet planes are harvested from these magic trees

Away back in the time of the Pharaohs a metal craftsman discovered how to make duplicates of his work by a unique "lost-wax" method of casting. For years this process has been used to make fine jewelry. And your dentist also uses it to make precise dental inlays.

CENTURIES-OLD METHOD REVIVED—Now this ancient process has been dusted off and brought up-to-date with modern chemistry and metallurgy. It answers the need for a method of making precise duplicates of hard metal parts. Now called *Precision Investment Casting*, it is used by Union Carbide to make vast numbers of metal parts for jet engines—sewing machines—refrigerators—and other things manufacturers produce for our defense and everyday living.

FROM WAX TO METAL—A wax pattern of the object is made and encased in a jacket of molding material. Then the wax is melted away and molten metal is poured in to replace it. The resulting casting is so smooth and accurate that little or no costly finishing is required.

NEW METHODS ALSO—And today foundries are also using the thin-shell process—as new as "lost-wax" is old. It uses synthetic resins and sand to make a thin but highly accurate sand mold. Its advantages? Clean, smooth castings . . . made faster . . . with much less molding materials.

THEY'RE UCC DEVELOPMENTS—The people of Union Carbide perfected and are using *Precision Investment Casting* in its present form. And they developed and manufacture the plastics and chemicals that have helped make the thin-shell process valuable to modern industry.

FREE: Learn more about the interesting things you use every day. Write for the illustrated booklet "Products and Processes" which tells how science and industry use the ALLIOTS, CARBONS, CHEMICALS, GASES, and PLASTICS made by Union Carbide. Ask for booklet E.
